On December 23, 1991, Bangor Hydro-Electric Company (Bangor Hydro) filed an application with the Federal Energy Regulatory Commission (Commission) under Part I of the Federal Power Act \(^1\) (FPA) for a new license authorizing the continued operation and maintenance of the 1.95-megawatt (MW) Stillwater Hydroelectric Project No. 2712, located on the Stillwater Branch of the Penobscot River in the city of Old Town, Penobscot County, Maine. \(^2\) The Commission issued an original license for this project to Bangor Hydro in 1978, effective April 1, 1962. \(^3\) The original license expired on December 31, 1993, and since then Bangor Hydro has operated the project under an annual license.

Bangor Hydro proposes no major construction or project modifications. For the reasons discussed below, we will issue a new license to Bangor Hydro for a period of 40 years.

**BACKGROUND**

\(^1\) 16 U.S.C. §807.

\(^2\) The Stillwater Branch of the Penobscot River is a navigable waterway of the United States. 1 FERC ¶ 61,104 (1977). Therefore the Stillwater Project is required to be licensed pursuant to § 23(b)(1) of the FPA.

\(^3\) 4 FERC ¶ 61,157 (1978).
Notice of the application for the Stillwater Project was published. 14/ Four parties filed timely and unopposed motions to intervene in this proceeding: Maine FLOW, Maine State Planning Office, U.S. Department of the Interior (Interior), and the Penobscot Indian Nation (Penobscot Nation). These motions were granted automatically under Rule 214(c)(1) of the Commission's Rules of Practice and Procedure. 15/ American Rivers' motion to intervene was opposed by Bangor Hydro. We are granting its motion.

Comments on the application were filed by the U.S. Fish and Wildlife Service (FWS), Atlantic Sea Run Salmon Commission, U.S. Army Corps of Engineers (Corps), Maine Department of Marine Resources, Maine Department of Environmental Protection (MDEP), U.S. Department of the Interior (Interior), Maine State Planning Office, National Marine Fisheries Service (NMFS), and the Penobscot Nation.

On November 15, 1994, the Commission's staff issued the Lower Penobscot River Basin Draft Environmental Impact Statement (Draft EIS), analyzing the Basin Mills, Milford, and Stillwater hydroelectric projects, and requesting public comment. The Commission received comment letters from Bangor Hydro; Atlantic Salmon Federation; Maine Council of Atlantic Salmon Federation; American Rivers, Inc.; Maine Audubon Society; Sportsman's Alliance of Maine; Trout Unlimited; Maine Council of Trout Unlimited; the Corps; Department of Commerce; Interior; U.S. Geological Survey; U.S. Environmental Protection Agency; Penobscot Nation; and the Penobscot River Coalition. The Commission's staff considered these comments in preparing the Final Environmental Impact Statement (Final EIS).

Concurrently with this order, we are issuing an Order on Applications for New and Original Licenses, which discusses issues common to three projects on the Penobscot and Stillwater Rivers. The discussion in that order is incorporated by reference herein.

PROJECT DESCRIPTION

The Stillwater Project's principal features are a meandering dam approximately 1,720 feet long, consisting of 13 sections, a concrete and wooden powerhouse, an impoundment about 3.1 miles long with a surface area of about 300 acres, and appurtenant facilities. The existing project has a total nameplate generator capacity of 1.95 MW and an average annual generation of about 13.1 gigawatthours (GWh). The maximum hydraulic capacity of the Stillwater Project is 1,700 cubic feet per second (cfs). Flows in the Stillwater Branch exceed the maximum hydraulic capacity of the project 60 percent of the time. A more detailed project description is contained in ordering paragraph B(2).

WATER QUALITY CERTIFICATION

Under Section 401(a)(1) of the Clean Water Act, 33 U.S.C. § 1341(a)(1), the Commission may not issue a license for a hydroelectric project unless the state's certifying agency has issued a water quality certification for the project or has waived certification. On October 23, 1992, the Maine Department of Environmental Protection granted water quality certification for the project, subject to certain conditions. The water quality certification contains 11 conditions, which are attached in full as Appendix A to this order.

APPLICANT'S PLANS AND CAPABILITIES

In accordance with Sections 10(a)(2)(C) and 15(a) of the FPA, we have evaluated Bangor Hydro's record as a Licensee with respect to the following: (1) consumption improvement program; (2) compliance history and ability to comply with the new license; (3) safe management, operation, and maintenance of the project; (4) ability to provide efficient and reliable electric service; (5) need

---

Section 401(a)(1) requires an applicant for a federal license or permit to conduct any activity which may result in any discharge into navigable waters to obtain from the state in which the discharge originates certification that any such discharge will comply with applicable water quality standards.
for power; (6) transmission services; (7) cost effectiveness of plans; and (8) actions affecting the public.

1. **Consumption Improvement Program**

   Section 10(a)(2)(C) of the FPA, 16 U.S.C. § 803(a)(2)(C), requires the Commission, in acting on a license application, to consider the extent of electricity consumption efficiency improvement programs in the case of license applicants primarily engaged in the generation or sale of electric power. Bangor Hydro submitted a comprehensive and detailed report, entitled "1988 Annual Narrative - Energy Management Services," that covers programs designed to improve the consumption efficiency and to reduce peak demands of metered customers.

   We have reviewed the report cited and conclude that Bangor Hydro has made in good faith a satisfactory effort to establish and maintain efficiency improvement and load management programs that comply with Section 10 (a)(2)(c) of the FPA and to support the objectives of the Electric Consumers Protection Act of 1986.

2. **Compliance History and Ability to Comply with the New License**

   We have reviewed Bangor Hydro's license application and its record of compliance with the existing license in an effort to judge its ability to comply with the articles, terms, and conditions of any license issued, and with other applicable provisions of this part of the FPA.

   Based on our review of Bangor Hydro's compliance record, we find that Bangor Hydro has complied in good faith with all articles, terms, and conditions of its current license. As a result of our review of its compliance record and the license application, we believe Bangor Hydro can satisfy the conditions of a new license.

3. **Safe Management, Operation, and Maintenance of the Project**

   Bangor Hydro ensures safe management, operation, and maintenance by holding periodic meetings for maintenance and management personnel to review and update safety procedures and
maintain a comprehensive safety policy. This includes displaying warning signs and buoys and installing and maintaining safety equipment.

Although Stillwater is exempt from FERC's five-year inspections, Bangor Hydro retains an independent consultant to inspect the project facilities every five years. In addition, the facility is inspected annually, and remedial/monitoring programs are developed as necessary.

As a result of our review of Bangor Hydro's plans, we conclude that it will be able to manage, operate, and maintain the Stillwater Project in a safe manner.

4. **Ability to Provide Efficient and Reliable Electric Service**

We reviewed Bangor Hydro's plans and its ability to operate and maintain the project in a manner most likely to provide efficient and reliable electric service.

Bangor Hydro evaluated four alternatives for the Stillwater Project, ranging from life extension of the original units to construction of a new powerhouse on the opposite side of the river. Bangor Hydro's economic analysis of the alternatives determined that none of the upgrade/expansion alternatives are presently feasible; therefore, Bangor Hydro is proposing no increase in either installed capacity or energy generation.

There are no personnel stationed at the project. Roving operators make a minimum of three trips to the plant during each shift for three shifts a day. During each of these plant visits, an operator takes water readings and makes adjustments to keep the impoundment level as constant as possible. The operator also checks the equipment, the plant, and its surrounding grounds including the substation and takes a full set of readings that are reported to the System Operator.

Bangor Hydro is refining the project operation to protect or enhance the project area's natural resources, such as passing minimum flows. Bangor Hydro also maintains and improves the project through various programs and refinements.
Based on our review of the information, we conclude that Bangor Hydro has been operating the project efficiently within the constraints of the existing license and that it would continue to provide efficient and reliable electric services in the future.

5. **Need for Power**

Bangor Hydro is an investor-owned electric utility serving more than 110,000 customers in the central and southern counties of Maine. As licensed herein, the Stillwater Project will generate an average of 13.1 gigawatthours (GWh) of energy annually for Bangor Hydro.

To assess the need for power, we reviewed not only Bangor Hydro's use and need for the project power, but also the needs in the operating region in which the project is located. The Stillwater Project is located in the New England Power Pool (NEPOOL) area of the Northeast Power Coordinating council region of the North American Electric Reliability Council (NERC). NERC annually forecasts electrical supply and demand in the nation and the region for a ten-year period.

NERC's most recent report 1/ on annual supply and demand projections indicates that, for the period 1995-2004, loads in the NEPOOL area will grow faster than planned capacity additions. The project displaces nonrenewable fossil-fired generation and contributes to diversification of the generation mix in the NEPOOL area. We conclude that the project's power, its low cost, its displacement of nonrenewable fossil-fired generation, and its contribution to a diversified generation mix will help meet a need for power in the NEPOOL area.

6. **Transmission Service**

We find that licensing the project to continue its current operations will have no significant effect on the licensee’s existing or planned transmission system.

7/ NERC's Electricity Supply and Demand Database, Data set 1995-2004.
7. **Cost Effectiveness of Plans**

Bangor Hydro has no plans for making other significant project changes, except for those periodically required to ensure the project's safety. Based on the license application and past practice, we conclude that Bangor Hydro's plans for constructing fish and recreation facilities, as well as its continued operation of the project, will be achieved in a cost-effective manner.

8. **Actions Affecting the Public**

Constructing fish passage facilities and additional recreational facilities and releasing minimum flows will increase benefits to fisheries and recreation opportunities and, therefore, will benefit the public.

**FISH PASSAGE**

Bangor Hydro contends that prescriptions filed by Interior and Commerce should not be given mandatory status, because they were filed after the deadline established in the public notice that the project was ready for environmental analysis. 1/

---

1/ See 18 C.F.R. § 4.43(b). As discussed in the lead order issued today in this proceeding, 83 FERC ¶ 61,039 (1998), we decline to address Bangor's arguments with respect to whether Interior is authorized to prescribe a fishway for the fish species at issue in this proceeding.
Interior and Commerce both filed requests that the Commission include in the license a reservation of their authority to prescribe fishways. 1/ Interior subsequently submitted a fishway prescription on February 17 and revised the prescription on June 22, 1995, and May 20, 1997; and Commerce submitted a prescription on February 16, 1995. A request for a reservation of prescription authority is not itself a prescription. 1/ And since the request is that a reservation of authority be included in the license, the reservation request cannot be invoked before the license is issued, and thus cannot make an untimely pre-license prescription timely. 1/

In any event, the agencies' late prescriptions were analyzed in the EIS as recommendations pursuant to FPA Section 10(a) and, as described below, we adopt most of those recommendations.

Article 405 requires that Bangor Hydro construct, operate and maintain fishways for the design populations of the species specified by Interior and to provide personnel of the U.S. Fish and Wildlife Service access to the project site and pertinent project records for the purpose of inspecting the fishways to determine compliance with the fishway conditions of the license. 1/

---

9/ The notice that the Stillwater application was ready for environmental analysis set March 15, 1993, as the deadline for submitting Section 18 prescriptions.

11/ This result is of limited import, as there remain the agencies' requests for reservation of their prescription authority, which we grant, pursuant to our policy. See Niagara Mohawk, supra.

12/ We have not included Interior's recommendation that all fishways be operational within three years as a condition of the license. Construction schedules are an element which must be included in the final design plans which Bangor Hydro must file with the Commission. Bangor Hydro must consult with Interior in preparing the design plans; however, the authority to determine the timing of the construction of project works, including fishways, rest exclusively with the Commission. See Niagara Mohawk Power Corp. 67 FERC ¶ 61,300 at p. 62, 039 (1994).
Articles 406 (addressing downstream fishways) and 407 (addressing upstream fishways) require that the licensee install and operate fish passage facilities at the project. These articles specify the migration periods during which the facilities must be operated. These articles also require Bangor Hydro to file and implement fishway maintenance and operational plans and to modify the fishways if the effectiveness studies required by Article 408 indicate that modifications are needed.

Article 408 requires Bangor Hydro to file and implement a plan to study the effectiveness of the fishways required by Article 406 and 407. If the study indicates that changes in the project's structures or operations, including flow, are necessary, Article 408 requires Bangor Hydro to file and implement a plan to improve the effectiveness of the fishways.

Article 409 contains a reservation of authority for the prescriptions of fishways under Section 18 of the Federal Power Act by the Secretary of the Interior.

---

13/ Article 406 also requires that Bangor Hydro install trashracks with a one-inch clear opening at the powerhouse turbine intake and gated surface and bottom bypasses discharging up to 70 cfs during the downstream migration period.

14/ We have not adopted Commerce's recommendation prohibiting trapping and trucking as a permanent means of fish passage. We have also not adopted Commerce's recommendation to prohibit the inclusion of fish pumps in fish passage design. Commerce's objections to these measures can be addressed during consultation, if they are proposed. We do not believe it is appropriate to categorically exclude either of these measures from consideration.

15/ Interior and Commerce recommended several alternative design types for the new fishways. Their preferences for the type of fishways to be constructed can be addressed during the consultation required during the design process or through the exercise of Interior's reservation of prescription authority contained in Article 409.
RECOMMENDATIONS OF FEDERAL AND STATE FISH AND WILDLIFE AGENCIES

Section 10(j) of the FPA requires the Commission, when issuing a license, to include conditions based on recommendations of federal and state fish and wildlife agencies submitted pursuant to the Fish and Wildlife Coordination Act, 1 to "adequately and equitably protect, mitigate damages to, and enhance fish and wildlife (including related spawning grounds and habitat)" affected by the project.

Pursuant to Section 10(j) of the FPA, we evaluated each recommendation of the federal and state fish and wildlife agencies for consistency with the purpose and requirements of Part I of the FPA or other applicable law. By executive order of the Governor of the State of Maine, the terms and conditions contained in Maine's 401 Water Quality Certifications represent the state's official recommendations regarding the application and supersede all preliminary recommendations by individual state agencies.

---

16/ 16 U.S.C. § 661 et al.
The draft EIS stated that Interior's recommendations concerning a recreation monitoring plan was an inappropriate fish and wildlife recommendation, and that a 230-cfs minimum flow in the Stillwater bypassed reach may be inconsistent with the balancing provisions of Section 4(e) and 10(a) of the FPA. Under Section 10(j)(2) of the FPA, whenever the Commission believes that any recommendations of the federal and state fish and wildlife agencies may be inconsistent with the FPA or other applicable law, the Commission shall attempt to resolve such inconsistencies. In a Section 10(j) meeting held on February 9, 1996, the Commission's staff requested that Interior consider specifying the habitat goals it sought and allow permanent flows to be within the range of 70 cfs, as specified in the water quality certification, up to 230 cfs, as originally sought by Interior. The required flow would be that amount sufficient to achieve the habitat goals after the berm is modified. Interior's subsequently provided revised minimum flows are incorporated in Articles 402 and 404.

COMPREHENSIVE PLANS

Section 10(a)(2) of the FPA requires the Commission to consider the extent to which a project is consistent with federal or state comprehensive plans for improving, developing, or conserving a waterway or waterways affected by the project. Under Section 10(a)(2), federal and state agencies filed a total of 18 plans. Of these, we identified eight as relevant to the project. No conflicts were found.

17/ Recommendations that are not specific measures to protect, mitigate, or enhance fish and wildlife resources are not subject to the Section 10(j) process. These recommendations, however, have been evaluated under Section 10(a) of the FPA and are discussed in the final EIS for the project.

Maine Department of Inland Fisheries and Wildlife; Species Assessments and Strategic Plans, 1991, Maine Department of Inland Fisheries and Wildlife; Gulf of Maine Rivers Ecosystem Plan, 1994, U.S. Fish and Wildlife Service.
COMPREHENSIVE DEVELOPMENT

Sections 4(e) and 10(a)(1) of the FPA, 16 U.S.C. §§ 797(e) and 803(a)(1) require the Commission, in acting on applications for license, to give equal consideration to the power and development purposes and to the purposes of energy conservation, the protection, mitigation of damage to, and enhancement of fish and wildlife, the protection of recreational opportunities, and the preservation of other aspects of environmental quality. Any license issued shall be best adapted to a comprehensive plan for improving or developing a waterway or waterways for all beneficial public uses. The decision to license this project, and the terms and conditions included herein, reflect such consideration.

The EIS analyzed the effects associated with the issuance of the new license for the Stillwater Project. It recommends a number of measures to protect and enhance environmental resources, which we adopt, as discussed herein. These measures will provide improved fish passage at the dam, protect fish and wildlife resources by requiring run-of-river operation, and enhance recreational resources in the project area.

In determining whether a proposed project will be best adapted to a comprehensive plan for developing a waterway for beneficial public purposes, pursuant to Section 10(a)(1) of the FPA, the Commission considers several public interest factors, including the economic benefits of project power.

Under the Commission's approach to evaluating the economics of hydropower projects, as articulated in Mead Corporation, Publishing Paper Division, 1/ the Commission employs an analysis that uses current costs to compare the costs of the project and likely alternative power with no forecasts concerning potential future inflation, escalation, or deflation beyond the license issuance date. The basic purpose of the Commission's economic analysis is to provide a general estimate of the potential power benefits and the costs of a project, and reasonable alternatives to project power. The estimate helps to support an informed decision concerning what is in the public interest with respect to a proposed license. In making its decision, the Commission considers the project power benefits both with the applicant's proposed mitigation and enhancement measures and with the Commission's proposed modifications and additions to the applicant's proposal.

In addition, certain economic factors related to project decommissioning impinge on the decision to issue a new license that are not present in the licensing of new projects. If an existing project is not issued a new license, or if the Licensee declines to accept the new license, the project probably will have to be retired in one form or another. This could range from simply removing the generator at the project to major environmental restoration varying from minor measures to dam removal.

As licensed by the Commission, the Stillwater Project will produce an average of about 12.208 GWh of energy, at an annual cost of about $552,300 (45.2 mills/kWh). The current annual value of the project's power would be $376,800 (30.9 mills/kWh). We base this value on the cost of alternative resources, which in this case is the cost of a new combined cycle combustion turbine plant and the regional cost of natural gas. 1/ To determine whether the proposed project is currently economically beneficial, we subtract the project's cost from the value of the project's power. Thus based on current costs, the project, as licensed by the Commission would cost about $175,500 (about 14.3 mills/kWh) more than the current cost of alternative power.

As described above, our evaluation of the economics of the project shows that the power it generates costs more than alternative power. However, as explained in Mead, the economic analysis is by necessity inexact, and project economics is only one of many public interest factors considered in determining whether or not, and under what conditions, to issue a license. 1/ Bangor Hydro is ultimately responsible and best able to determine whether continued operation

20/ Our estimate of the value of power is more completely described in the EIS.

21/ In analyzing public interest factors, we consider the fact that hydroelectric projects offer unique electric utility system operational benefits and that proposed projects may provide substantial benefits not directly related to utility operations, benefits that would be lost if a license were denied solely on economic grounds. See City of Augusta, et al., 72 FERC ¶ 61,114, at p. 61,599, n. 57 (1995).
of the existing project, with the conditions adopted herein, is a reasonable decision in these circumstances.

Based on our review of the comments on this project filed by agencies and the public, our review of the staff's evaluation of the environmental and economic effects of the proposed project and its alternatives, and our analysis pursuant to Sections 4(e) and 10(a)(1), we find that the Stillwater Project, with our mitigative and enhancement measures, will be best adapted to the comprehensive development of the Stillwater River for beneficial public uses.

LICENSE TERM

Section 15(e) of the FPA specifies that any license issued under Section 15 shall be for a term that the Commission determines to be in the public interest, but not less than 30 years, nor more than 50 years. The Commission's policy is to establish 30-year terms for projects that propose little or no redevelopment, new construction, or new capacity; 40-year terms for projects that propose moderate redevelopment, new construction, or new capacity; and 50-year terms for projects that propose extensive redevelopment, new construction, or new capacity.

In our policy statement on cumulative impacts and license reopeners, we stated that we would endeavor to coordinate the expiration dates of licenses for projects located in the same river basin to the maximum extent feasible, consistent with our commitment to considering the cumulative impacts of projects in the same river basin collectively at relicensing. 1/ Issuing a license for the Stillwater Project with the same expiration date as for the Milford and Veazie Projects would further this policy by ensuring that these licenses expire simultaneously. Therefore, we will issue a license for a 40-year term for the Stillwater Project, effective the first day of the month in which this license is issued.

SUMMARY OF FINDINGS

The EIS issued for this project includes background information, analysis of effects, discussion of enhancement measures, and support for related license articles. The project will not produce any major, long-term adverse environmental effects.

The design of this project is consistent with the engineering standards governing dam safety. The project will be safe if operated and maintained in accordance with the requirements of this license.

We conclude that the project will not conflict with any planned or authorized development and will be best adapted to the comprehensive development of the lower Penobscot River Basin for beneficial public uses.

The Commission orders:

(A) This license is issued to Bangor Hydro-Electric Company (Licensee) for a period of 40 years, effective the first day of the month in which this order is issued, to operate and maintain the Stillwater Hydroelectric Project. This license is subject to the terms and conditions of the Federal Power Act, which is incorporated by reference as part of this license, and subject to the regulations the Commission issues under the provisions of the Federal Power Act.

(B) The project consists of:

(1) All lands, to the extent of the Licensee's interest in those lands, enclosed by the project boundary shown by exhibit G:

(2) Project works consisting of:

(a) A main concrete gravity dam, totaling about 1,720 feet long, with a maximum height of 22 feet at crest elevation 91.65 feet National Geodetic Vertical Datum (NGVD), consisting of 13 sections: a non-overflow section, totaling 63 feet long, which serves as an abutment and wingwall, containing a 6-footwide unused stoplog sluice gate; a 381-foot-long primary spillway section, with a maximum height of 22 feet at a crest elevation of 91.65 feet NGVD, topped with 2.0-foot-high pin-supported flashboards; an 85-foot-long by 2-foot-wide by 2.5-foot-high leveling concrete course; a 43-foot-long concrete sill section on top of a ledge island; a 174-foot-long ogee section, with varying heights from 4 to 20 feet, topped with 2.0-foot-high pin-supported flashboards; a 52-foot-long ogee section, with a maximum height of 9 feet, topped with a concrete curb, 15 inches wide by 25 inches high; a 105-foot-long spillway section, with an average height of 6 feet; a 42-foot-long spillway section, with a maximum height of 8 feet, topped with 1-foot-high pin-supported flashboards; a 73.5-foot-long abutment section, with an average height of 4 feet; a 187-foot-long non-overflow section, with varying heights from 3 to 12 feet, which abuts an abandoned powerhouse; a 63-foot-long non-overflow section, which is part of the abandoned powerhouse's foundation; a 197.5-foot-long section, with varying heights from 2 to 4 feet, abutting the old and existing powerhouses; and a 162.5-foot-long non-overflow section, with a downstream-facing earth backfill, having a maximum height of 12 feet,
topped with a 2-foot-high concrete curb and a driveway on top of the earth backfill;

(b) A concrete and wooden powerhouse, about 83.5 feet long by 32 feet wide by 45 feet high, equipped with four horizontal hydroelectrical generating units: three of which are rated at 450-kilowatts (Kw) each, with a net head of 18 feet and a hydraulic capacity range from 380 to 1,140 cubic feet per (cfs); and one rated at 600 Kw, with a net head of 18 and a hydraulic capacity of 560 cfs; all totaling a rated capacity of 1,950 Kw; a hydraulic capacity range from 380 to 1,700 cfs; an average annual generation of about 13,120,000 kWh; and each having a net head of 18 feet;

(c) An impoundment, about 3.1 miles long, having a surface area of about 300 acres (AC); a gross storage capacity of 3,040 acre-feet (AF); a negligible useable storage capacity; a normal headwater surface elevation of about 93.65 feet NGVD; and a normal tailwater surface elevation of about 73.65 feet NGVD; and

(d) Appurtenant facilities.

The project works generally described above are more specifically shown and described by those portions of Exhibits A and F shown below.

Exhibit A: The following sections of Exhibit A filed December 23, 1991:

Pages A-1 through A-11, including Table A-1 describing the existing mechanical, electrical and transmission equipment.

(3) All of the structures, fixtures, equipment, or facilities used to operate or maintain the project and located within the project boundary, all portable property that may be employed in connection with the project and located within or outside the project boundary, and all riparian or other rights that are necessary or appropriate in the operation or maintenance of the project.

(C) The Exhibits A, F, and G described above are approved and made part of the license.

(D) This license is subject to the articles set forth in Form L-3 (October 1975), entitled "Terms and Conditions of License for Constructed Major Project Affecting Navigable Waters of the United States", and the following additional articles:

Article 201. The Licensee shall pay the United States the following annual charges, effective as of the first day of the month in which this license is issued, for the purposes of reimbursing the United States for the costs of administering Part I of the Federal Power Act, a reasonable amount as determined in accordance with the provisions of the Commission's regulations in effect from time to time. The authorized installed capacity for that purpose is 1,920 kilowatts.

Article 202. Within 45 days of the date of issuance of the license, the licensee shall file an original set and two duplicate sets of aperture cards of the approved drawings. The set of originals must be reproduced on silver or gelatin 35 mm microfilm. The duplicate sets are copies of the originals made on diazo-type microfilm. All microfilm must be mounted on type D (3-1/4 x 7-3/8") aperture cards.

Prior to microfilming, the FERC Drawing Number (2712-1001 through 2712-1006) shall be shown in the margin below the title block of the approved drawing. After mounting, the FERC Drawing Number must be typed on the upper right corner of each aperture card. Additionally, the Project Number, FERC Exhibit (e.g., F-1, G-1, etc.), Drawing Title, and date of this license must be typed on the upper left corner of each aperture card.
The original and one duplicate set of aperture cards must be filed with the Secretary of the Commission, ATTN: DPCA/ERB. The remaining duplicate set of aperture cards shall be filed with the Commission's New York Regional Office.

Article 203. Pursuant to Section 10(d) of the FPA, a specified reasonable rate of return upon the net investment in the project shall be used for determining surplus earnings of the project for the establishment and maintenance of amortization reserves. The Licensee shall set aside in a project amortization reserve account at the end of each fiscal year one half of the project surplus earnings, if any, in excess of the specified rate of return per annum on the net investment.

To the extent that there is a deficiency of project earnings below the specified rate of return per annum for any fiscal year, the Licensee shall deduct the amount of that deficiency from the amount of any surplus earnings subsequently accumulated, until absorbed. The Licensee shall set aside one-half of the remaining surplus earnings, if any, cumulatively computed, in the project amortization reserve account. The Licensee shall maintain the amounts established in the project amortization reserve account until further order of the Commission.

The specified reasonable rate of return used in computing amortization reserves shall be calculated annually based on current capital ratios developed from an average of 13 monthly balances of amounts properly included in the Licensee's long-term debt and proprietary capital accounts as listed in the Commission's Uniform System of Accounts. The cost rate for such ratios shall be the weighted average cost of long-term debt and preferred stock for the year, and the cost of common equity shall be the interest rate on 10-year government bonds (reported as the Treasury Department's 10 year constant maturity series) computed on the monthly average for the year in question plus four percentage points (400 basis points).

Article 401. The Licensee shall operate the Stillwater Project in a run-of-river mode for the protection of fisheries resources and recreational opportunities in the Stillwater Branch of the Penobscot River. Except as temporarily modified by approved maintenance activities, inflows to the project area, or operating emergencies beyond the Licensee's control, the Licensee shall
maintain water levels in the Stillwater impoundment within one foot of normal full pond elevation of 93.65 feet NGVD while flashboards are in place.

The Licensee shall at all times act to minimize the fluctuation of the reservoir surface elevation by maintaining a discharge from the project so that, at any point in time, outflows, as measured immediately downstream from the project tailrace, approximate the sum of inflows to the project reservoir.

Run-of-river operation may be temporarily modified if required by operating emergencies beyond the control of the Licensee, and for short periods upon mutual agreement between the Licensee and the Maine Department of Environmental Protection. If the flow is so modified, the Licensee shall notify the Commission as soon as possible, but no later than 10 days after each such incident.

The Licensee shall prepare a plan in consultation with the Maine Department of Environmental Protection to monitor the water levels in Stillwater Impoundment and file the plan with the Commission, for approval, no later than 180 days after the issuance of this license. The Commission reserves the right to require changes to the water level monitoring plan. Upon Commission approval, the Licensee shall implement the plan, including any changes required by the Commission.

**Article 402.** The Licensee shall release from the Stillwater Project an interim minimum flow of 40 cubic feet per second (cfs) into the so-called west bypass channel and an interim minimum flow of 190 cfs into the so-called east bypass channel, as measured at a location determined in consultation with the Maine Department of Environmental Protection, the U.S. Department of the Interior, the U.S. Geological Survey, and the Penobscot Indian Nation, or inflow to the project reservoir, whichever is less, for the protection and enhancement of fish and wildlife resources, water quality, and recreation opportunities on the Stillwater Branch of the Penobscot River.

This flow may be temporarily modified if required by operating emergencies beyond the control of the Licensee, and for short periods upon mutual agreement between the Licensee and the Maine Department of Environmental Protection. If the flow is so modified, the
Licensee shall notify the Commission as soon as possible, but no later than 10 days after each such incident.

Article 403. The Licensee shall, in consultation with the Maine Department of Inland Fisheries and Wildlife, the Maine Department of Marine Resources, the Atlantic Sea Run Salmon Commission, the U.S. Fish and Wildlife Service and the Penobscot Indian Nation, prepare a plan to make physical modifications to the gravel/cobble berm separating sections 1 and 3 of the Stillwater bypassed reach to improve fish habitat availability. The Licensee shall file the plan with the Commission, for approval, no later that 180 days after issuance of this license.

The plan shall be reviewed by the state and federal fisheries agencies and the Maine Department of Environmental Protection Bureau of Land Quality Control. The Commission reserves the right to require changes to the berm modification plan. Activities shall not begin until the Licensee is notified by the Commission that these plans are approved. Upon Commission approval, the Licensee shall implement the plan, including any changes required by the Commission.

Article 404. The Licensee shall, in consultation with the Maine Department of Inland Fisheries and Wildlife, the Maine Department of Marine Resources, the Atlantic Sea Run Salmon Commission, the U.S. Fish and Wildlife Service and the Penobscot Indian Nation, prepare a plan to study various minimum flow releases between leakage and 40 cfs in the west bypassed reach and between leakage and 190 cfs on the habitat in sections 1, 2, and 3, of the east bypassed reach, following berm modification. The purpose of the study will be to determine the permanent minimum flow in the east and west channels of the Stillwater bypassed reach. The target habitat units of the combined areas of the east bypassed reach are an additional 80.6 salmon nursery habitat units, 176.6 smallmouth bass spawning/incubation habitat units, 268 smallmouth bass young-of-year habitat units, 434.9 smallmouth bass juvenile habitat units, 311.4 smallmouth bass adult habitat units, 60 shad spawning/incubation habitat units, and 328.2 shad larvae/juvenile habitat units. These target habitat units are to be attained with flows into the bypassed reach no greater than 230 cfs and no less than 70 cfs.

The plan shall be reviewed by the state and federal fisheries agencies and the Maine Department of Environmental Protection Bureau
of Land Quality Control. The Licensee shall file the plan with the Commission, for approval, no later than 180 days after issuance of this license.

Results from the minimum flow study and the Licensee's plans for maintenance of the berm and long-term minimum flow releases that will adequately maintain fish habitat in sections 1, 2, and 3 shall be submitted to the Maine Department of Environmental Protection Bureau of Land Quality Control and the Commission within 18 months of license issuance for the project.

The Commission reserves the right to require changes to the berm maintenance plan and minimum flow study. Activities shall not begin until the Licensee is notified by the Commission that these plans are approved. Upon Commission approval, the Licensee shall implement the plan, including any changes required by the Commission.

Article 405. Fishways shall be constructed, operated, and maintained at the Stillwater Project to provide effective (safe, timely, and convenient) passage for the mainstem Penobscot River design populations of Atlantic salmon, American shad, alewives, and unquantified numbers of blueback herring and American eels at the Licensee's expense. The quantified design populations for the mainstem Penobscot River for each target species is: 2.1 million Atlantic salmon; 250,000 American shad; up to 12,000 alewife. The fishways for the Stillwater Project should be sized appropriately for the migrating populations that use this portion of the river.

The Licensee shall provide personnel of the U.S. Fish and Wildlife Service, and other Service designated representatives, access to the project site and to pertinent project records for the purpose of inspecting the fishways to determine compliance with the fishway prescriptions.

Article 406. The Licensee shall install and operate permanent downstream fish passage facilities at the Stillwater Project. Fishways shall be maintained and operated to maximize fish passage effectiveness throughout fish migration period(s) as defined below. The downstream migration period is defined as April 1 to June 30 for Atlantic salmon, July 1 to December 31 for American shad and alewife, August to December 31 for blueback herring, and August 15 to November 15 (or other time periods determined when adequate information is available, and during any spring run that may occur)
for American eel. Downstream facilities are to operate whenever generation occurs during the downstream migration period. The Licensee shall keep the fishways in proper order and shall keep fishway areas clear of trash, logs, and material that would hinder passage. Anticipated maintenance shall be performed in sufficient time before a migratory period such that fishways can be tested and inspected and will operate effectively prior to and during the migratory periods.

Fishway maintenance and operational plans (including schedules) for all fish passage facilities shall be developed by the Licensee in consultation and cooperation with the U.S. Fish and Wildlife Service (FWS), the Penobscot Indian Nation (Penobscot Nation), and other fishery agencies (including the Maine Department of Inland Fisheries and Wildlife, Maine Department of Marine Resources, and the National Marine Fisheries Service). Functional design and final design plans for all fishways shall be developed in consultation and cooperation with the FWS, Penobscot Nation, and other fishery agencies.

Downstream fishways shall consist of installation of trashracks with 1" clear opening at the powerhouse turbine intake and gated surface and bottom bypasses discharging up to 70 cfs during the downstream migration period.

Within 180 days after the date of license issuance, the Licensee shall file, for Commission approval, detailed design drawings of the Licensee's proposed permanent downstream fish passage facilities. This filing shall include but not be limited to: (1) the location and design specifications of the passage facilities; (2) a schedule for installing the facilities; and (3) procedures for operating and maintaining the facilities.

The Licensee shall include with the filing documentation of consultation, copies of agency comments and recommendations on the drawings, plans, and schedule after they have been prepared and provided to the agencies, and specific descriptions of how the agencies' comments are accommodated by the Licensee's facilities. The Licensee shall allow a minimum of 30 days for the agencies to comment and to make recommendations before filing the drawings, plans, and schedule with the Commission. If the Licensee does not
adopt a recommendation, the filing shall include the Licensee's reasons, based on project-specific information.

The Commission reserves the right to require changes to the proposed facilities and schedule. No construction of downstream fish passage facilities shall begin until the Licensee is notified by the Commission that the plan is approved. Upon Commission approval, the Licensee shall implement the proposal, including any changes required by the Commission.

Article 407. The Licensee shall install and operate permanent upstream fish passage facilities at the Stillwater Project. Fishways shall be maintained and operated to maximize fish passage effectiveness throughout fish migration period(s) as defined below. The upstream migration period is defined as April 15 to November for Atlantic salmon, May 1 to June 30 for American shad and alewife, June 1 to July 31 for blueback herring, and April 1 to November 30 for American eel. The Licensee shall keep the fishways in proper order and shall keep fishway areas clear of trash, logs, and material that would hinder passage. Anticipated maintenance shall be performed in sufficient time before a migratory period such that fishways can be tested and inspected and will operate effectively prior to and during the migratory periods.

Fishway design, maintenance and operational plans (including schedules) for all fish passage facilities shall be developed by the Licensee in consultation and cooperation with the U.S. Fish and Wildlife Service (FWS), the Penobscot Indian Nation (Penobscot Nation), and other fishery agencies (including the Maine Department of Inland Fisheries and Wildlife, Maine Department of Marine Resources, and the National Marine Fisheries Service). Functional design and final design plans for all fishways shall be developed in consultation and cooperation with the FWS, Penobscot Nation, and other fishery agencies. Upstream fishways must be designed to operate at mainstem Penobscot River flows up to 40,000 cfs (as measured for the Penobscot River at the U.S. Geological Survey gaging station at Eddington) during any upstream migration period designated herein. An attraction flow of up to 50 cfs at the fishway entrance shall be provided.

Within 180 days after the date of license issuance, the Licensee shall file, for Commission approval, detailed design drawings for
permanent upstream fish passage facilities. This filing shall include but not be limited to: (1) the location and design specifications of the passage facilities; (2) a schedule for installing the facilities; and (3) procedures for operating and maintaining the facilities.

The Licensee shall include with the plan documentation of consultation, copies of comments and recommendations on the completed plan after it has been prepared and provided to the agencies, and specific descriptions of how the agencies' comments are accommodated by the plan. The Licensee shall allow a minimum of 30 days for the agencies to comment and to make recommendations before filing the plan with the Commission. If the Licensee does not adopt a recommendation, the filing shall include the Licensee's reasons, based on project-specific information.

The Commission reserves the right to require changes to the proposed facilities and schedule. No land-disturbing or land-clearing activities related to upstream fish passage shall begin until the Licensee is notified by the Commission that the plan is approved. Upon Commission approval, the Licensee shall implement the proposal, including any changes required by the Commission.

**Article 408.** Within 18 months after license issuance, the Licensee shall file with the Commission, for approval, a plan to monitor the effectiveness of all the facilities and flows provided pursuant to Articles 406 and 409 of this license that will enable the efficient and safe passage of anadromous fish migrating upstream and downstream. The results of these monitoring studies shall be submitted to the agencies listed below and shall provide a basis for recommending future structural or operational changes at the project.

The monitoring plan shall include a schedule for: (1) implementation of the plan; (2) consultation with the appropriate federal and state agencies concerning the results of the monitoring; and (3) filing the results, agency comments, and Licensee's response to agency comments with the Commission.

The Licensee shall prepare the monitoring plan after consultation with the U.S. Fish and Wildlife Service, Maine Department of Marine Resources, the Maine Department of Environmental
Protection, the Penobscot Indian Nation, and the National Marine Fisheries Service.

The Licensee shall include with the plan documentation of agency consultation, copies of agency comments and recommendations on the plan after it has been prepared and provided to them, and specific descriptions of how the agencies' comments are accommodated by the Licensee's plan. The Licensee shall allow a minimum of 30 days for the agencies to comment and to make recommendations before filing the plan with the Commission. If the Licensee does not adopt a recommendation, the filing shall include the Licensee's reasons, based on project-specific information.

The Commission reserves the right to require changes to the proposed plan. Upon Commission approval, the Licensee shall implement the plan, including any changes required by the Commission.

If the results of the monitoring indicate that changes in project structures or operations, including alternative flow releases, are necessary to protect fish resources, the Licensee shall first consult with the agencies listed above to develop recommended measures for amelioration and then file its proposal with the Commission, for approval. The Commission reserves its authority to require the Licensee to modify project structures or operations to protect and enhance aquatic resources.

Article 409. Authority is reserved by the Commission to require the Licensee to construct, operate, and maintain, or to provide for the construction, operation, and maintenance of, such fishways as may be prescribed by the Secretary of the Interior under Section 18 of the Federal Power Act.

Article 410. Within one year of license issuance, the Licensee shall construct and provide for the operation and maintenance of the following recreational facilities:

(1) provide fencing around the parking area on the east bank of the Stillwater dam and signs warning against launching canoes and walking out on to the dam;
(2) provide gravel fill to the University of Maine to be used to create parking areas and one hand-carry boat and canoe access site;

(3) provide surfacing materials for handicapped access to the northern cove in the University Forest adjacent to the Stillwater impoundment; and

(4) designate a visitor parking area at the Stillwater powerhouse and continue to provide and maintain the portage trail around Stillwater dam, providing safety booms and hazard warning signs near the Stillwater dam, and assess the demand for additional recreational opportunities in conjunction with FERC Form 80 surveys.

The Licensee shall construct these facilities after consultation with the Maine Department of Conservation and the Maine Department of Environmental Protection Bureau Land Quality Control. These facilities shall be shown on the as-built drawings filed pursuant to this license.

The Licensee shall file a report with the as-built drawings, which shall include the entity responsible for operation and maintenance of the facilities, documentation of consultation, copies of comments and recommendations on the report after it has been prepared and provided to the agencies, and specific descriptions of how the agencies’ comments are accommodated by the report. The Licensee shall allow a minimum of 30 days for the agencies to comment before filing the report with the Commission. If the Licensee does not adopt a recommendation, the filing shall include the Licensee’s reasons, based on project-specific information.

Article 411. The Licensee, after consultation with the Town of Orono, National Park Service, Penobscot Indian Nation, Maine Department of Environmental Protection, and Maine Department of Conservation, shall monitor recreation and Indian cultural use of the project area to determine whether existing recreation facilities are meeting recreation and Indian cultural use needs. Monitoring studies shall begin within six years of the issuance date of this license. Monitoring studies, at a minimum, shall include collection of annual recreation use data.
Every six years during the term of the license, the Licensee shall file a report with the Commission on the monitoring results. This report shall include:

(1) annual recreation and Indian cultural use figures;

(2) a discussion of the adequacy of the Licensee’s recreation facilities at the project site to meet recreation demand;

(3) a description of the methodology used to collect all study data;

(4) if there is need for additional facilities, the licensee's design of recreational facilities and how such design takes into account the national standards established by the Architectural and Transportation Barriers Compliance Board pursuant to the Americans with Disabilities Act of 1990;

(5) documentation of agency consultation and agency comments on the report after it has been prepared and provided to the agencies; and

(6) specific descriptions of how the agency comments are accommodated by the report.

The Licensee shall allow a minimum of 30 days for the agencies to comment and to make recommendations prior to filing the report with the Commission.

**Article 412.** The Licensee shall implement the "Programmatic Agreement Among the Federal Energy Regulatory Commission, the Advisory Council on Historic Preservation, and the Maine State Historic Preservation Officer, for Managing Historic Properties That May Be Affected By A License Issuing To Bangor Hydro-Electric Company To Continue Operating The Stillwater Hydroelectric Project In Maine", executed on August 8, 1997, including but not limited to the Cultural Resources Management Plan for the Project. In the event that the
Programmatic Agreement is terminated, the Licensee shall implement the provisions of its approved Cultural Resources Management Plan. The Commission reserves the authority to require changes to the Cultural Resources Management Plan at any time during the term of the license. If the Programmatic Agreement is terminated prior to Commission approval of the Cultural Resources Management Plan, the Licensee shall obtain Commission approval before engaging in any ground disturbing activities or taking any other action that may affect any historic properties within the Project's area of potential effect.

**Article 413.** (a) In accordance with the provisions of this license, the Licensee shall have the authority to grant permission for certain types of use and occupancy of project lands and waters and to convey certain interests in project lands and waters for certain types of use and occupancy, without prior Commission approval. The Licensee may exercise the authority only if the proposed use and occupancy is consistent with the purposes of protecting and enhancing the scenic, recreational, and other environmental values of the project. For those purposes, the Licensee shall also have continuing responsibility to supervise and control the use and occupancies for which it grants permission, and to monitor the use of, and ensure compliance with the covenants of the instrument of conveyance for, any interests that it has conveyed, under this license. If a permitted use and occupancy violates any condition of this license or any other condition imposed by the Licensee for protection and enhancement of the project's scenic, recreational, or other environmental values, or if a covenant of a conveyance made under the authority of this license is violated, the Licensee shall take any lawful action necessary to correct the violation. For a permitted use or occupancy, that action includes, if necessary, canceling the permission to use and occupy the project lands and waters and requiring the removal of any non-complying structures and facilities.

(b) The type of use and occupancy of project lands and water for which the Licensee may grant permission without prior Commission approval are: (1) landscape plantings; (2) non-commercial piers, landings, boat docks, or similar structures and facilities that can accommodate no more than 10 watercraft at a time and where said facility is intended to serve single-family type dwellings; (3) embankments, bulkheads, retaining walls, or similar structures for
erosion control to protect the existing shoreline; and (4) food plots and other wildlife enhancement.

To the extent feasible and desirable to protect and enhance the project's scenic, recreational, and other environmental values, the Licensee shall require multiple use and occupancy of facilities for access to project lands or waters. The Licensee shall also ensure, to the satisfaction of the Commission's authorized representative, that the use and occupancies for which it grants permission are maintained in good repair and comply with applicable state and local health and safety requirements. Before granting permission for construction of bulkheads or retaining walls, the Licensee shall: (1) inspect the site of the proposed construction; (2) consider whether the planting of vegetation or the use of riprap would be adequate to control erosion at the site; and (3) determine that the proposed construction is needed and would not change the basic contour of the reservoir shoreline.

To implement this paragraph (b), the Licensee may, among other things, establish a program for issuing permits for the specified types of use and occupancy of project lands and waters, which may be subject to the payment of a reasonable fee to cover the Licensee's costs of administering the permit program. The Commission reserves the right to require the Licensee to file a description of its standards, guidelines, and procedures for implementing this paragraph (b) and to require modification of those standards, guidelines, or procedures.

(c) The Licensee may convey easements or rights-of-way across, or leases of, project lands for: (1) replacement, expansion, realignment, or maintenance of bridges or roads where all necessary state and federal approvals have been obtained; (2) storm drains and water mains; (3) sewers that do not discharge into project waters; (4) minor access roads; (5) telephone, gas, and electric utility distribution lines; (6) non-project overhead electric transmission lines that do not require erection of support structures within the project boundary; (7) submarine, overhead, or underground major telephone distribution cables or major electric distribution lines (69-kV or less); and (8) water intake or pumping facilities that do not extract more than one million gallons per day from a project reservoir.
No later than January 31 of each year, the Licensee shall file three copies of a report briefly describing for each conveyance made under this paragraph (c) during the prior calendar year, the type of interest conveyed, the location of the lands subject to the conveyance, and the nature of the use for which the interest was conveyed.

(d) The Licensee may convey fee title to, easements or rights-of-way across, or leases of project lands for:
(1) construction of new bridges or roads for which all necessary state and federal approvals have been obtained; (2) sewer or effluent lines that discharge into project waters, for which all necessary federal and state water quality certification or permits have been obtained; (3) other pipelines that cross project lands or waters but do not discharge into project waters; (4) non-project overhead electric transmission lines that require erection of support structures within the project boundary, for which all necessary federal and state approvals have been obtained; (5) private or public marinas that can accommodate no more than 10 watercraft at a time and are located at least one-half mile (measured over project waters) from any other private or public marina; (6) recreational development consistent with an approved Exhibit R or approved report on recreational resources of an Exhibit E; and (7) other uses, if: (i) the amount of land conveyed for a particular use is five acres or less; (ii) all of the land conveyed is located at least 75 feet, measured horizontally, from project waters at normal surface elevation; and (iii) no more than 50 total acres of project lands for each project development are conveyed under this clause (d)(7) in any calendar year.

At least 60 days before conveying any interest in project lands under this paragraph (d), the Licensee must submit a letter to the Director, Office of Hydropower Licensing, stating its intent to convey the interest and briefly describing the type of interest and location of the lands to be conveyed (a marked exhibit G or K map may be used), the nature of the proposed use, the identity of any federal or state agency official consulted, and any federal or state approvals required for the proposed use. Unless the Director, within 45 days from the filing date, requires the Licensee to file an application for prior approval, the Licensee may convey the intended interest at the end of that period.
(e) The following additional conditions apply to any intended conveyance under paragraph (c) or (d) of this article:

(1) Before conveying the interest, the Licensee shall consult with federal and state fish and wildlife or recreation agencies, as appropriate, and the State Historic Preservation Officer.

(2) Before conveying the interest, the Licensee shall determine that the proposed use of the lands to be conveyed is not inconsistent with any approved exhibit R or approved report on recreational resources of an exhibit E; or, if the project does not have an approved exhibit R or approved report on recreational resources, that the lands to be conveyed do not have recreational value.

(3) The instrument of conveyance must include the following covenants running with the land: (i) the use of the lands conveyed shall not endanger health, create a nuisance, or otherwise be incompatible with overall project recreational use; (ii) the grantee shall take all reasonable precautions to insure that the construction, operation, and maintenance of structures or facilities on the conveyed lands will occur in a manner that will protect the scenic, recreational, and environmental values of the project; and (iii) the grantee shall not unduly restrict public access to project waters.

(4) The Commission reserves the right to require the Licensee to take reasonable remedial action to correct any violation of the terms and conditions of this ice, for the protection and enhancement of the project's scenic, recreational, and other environmental values.

(f) The conveyance of an interest in project lands under this license does not in itself change the project boundaries. The project boundaries may be changed to exclude land conveyed under this license only upon approval of revised exhibit G or K drawings (project boundary maps) reflecting exclusion of that land. Lands conveyed under this license will be excluded from the project only upon a determination that the lands are not necessary for project purposes, such as operation and maintenance, flowage, recreation, public access, protection of environmental resources, and shoreline
control, including shoreline aesthetic values. Absent extraordinary circumstances, proposals to exclude lands conveyed under this license from the project shall be consolidated for consideration when revised exhibit G or K drawings would be filed for approval for other purposes.

(g) The authority granted to the Licensee under this article shall not apply to any part of the public lands and reservations of the United States included within the project boundary.

(E) The Licensee shall serve copies of any Commission filing required by this order on any entity specified in this order to be consulted on matters related to that filing. Proof of service on these entities must accompany the filing with the Commission.

(F) The motion to intervene filed by American Rivers is granted.

(G) This order is final unless a request for rehearing is filed within 30 days from the date of its issuance, as provided in Section 313(a) of the FPA. The filing of a request for rehearing does not operate as a stay of the effective date of this license or of any other date specified in this order, except as specifically ordered by the Commission. The Licensee's failure to file a request for rehearing shall constitute acceptance of this license.

By the Commission.

( S E A L )

Linwood A. Watson, Jr.,
Acting Secretary.
THEREFORE, the Department GRANTS certification that there is a reasonable assurance that the continued operation of the Stillwater Hydro Project, as described above, will not violate applicable water quality standards, SUBJECT TO THE FOLLOWING CONDITIONS:

1. INTERIM MINIMUM FLOWS

   A. Except as temporarily modified by operating emergencies beyond the applicant's control, as defined below, the facility shall be operated as run-of-river (outflow equals inflow) while passing an interim minimum flow of 20 cfs in the so-called west bypass channel and an interim minimum flow of 50 cfs in the east bypass channel.

   B. Operating emergencies beyond the applicant's control include, but may not be limited to, equipment failure or other temporary abnormal operating condition, generating unit operation or interruption under power supply emergencies, and orders from local, state, or federal law enforcement or public safety authorities.

   C. The applicant shall, in accordance with the schedule established in a new FERC license for the project, submit plans for providing and monitoring the minimum flow required by Part A of this condition. These plans shall be reviewed by and must receive approval of the DEP Bureau of Land Quality Control.

2. BERM MODIFICATION AND MINIMUM FLOW STUDY

   A. The applicant shall make physical modifications to the gravel/cobble berm separating habitat sections 1 and 3 and conduct a minimum flow study to determine habitat availability for the life stages of the target fish species previously evaluated.

   B. The applicant shall, in consultation with the Department of Inland Fisheries and Wildlife, the Department of Marine Resources, the Atlantic Sea Run Salmon Commission, and the Penobscot Indian Nation, prepare a plan to make physical modifications to the gravel/cobble berm separating section 1 and 3 as seen on Exhibit #3, and to conduct a study assessing the impact of various minimum flow releases between leakage and 190 cfs, on the habitat in sections 1, 2, and 3. The plan shall be reviewed by and must receive approval of state and federal fisheries agencies and the DEP Bureau of Land Quality Control.
C. The results of the minimum flow study and the applicant's proposals for maintenance of the berm and long-term minimum flow releases that will adequately maintain fish habitat in sections 1, 2, and 3 shall be submitted to the DEP Bureau of Land Quality Control within one full field season following the issuance of a new FERC license for the project. After reviewing the study results, the applicant's proposal, and agency comments, the Department shall order such continuation or modification of the interim minimum flow established by this approval as is deemed necessary to maintain adequate fish habitat in section 1, 2, and 3 and in the west bypass channel.

3. WATER LEVELS

A. Except as temporarily modified by normal maintenance activities or by inflows to the project area or by operating emergencies beyond the applicant's control, as defined below, water levels in the Stillwater impoundment shall be maintained within one foot of normal full pond elevation of 93.65 feet (NGVD) while flashboards are in place.

B. Operating emergencies beyond the applicant's control include, but may not be limited to, equipment failure or other temporary abnormal operating conditions, generating unit operation or interruption under power supply emergencies, and orders from local, state, or federal law enforcement or public safety authorities.

C. The applicant shall, in accordance with the schedule established in a new FERC license for the project, submit plans for providing and monitoring the water levels in the Stillwater impoundment as required in Part A of this condition. These plans shall be reviewed by and must be receive approval of the DEP Bureau of Land Quality Control.

4. FISH PASSAGE FACILITIES

A. The applicant shall install and operate permanent upstream and downstream fish passage facilities at the Stillwater Project as proposed in the application.

B. The applicant shall, in accordance with the schedule established in a new FERC license for the project, submit functional design drawings, a construction schedule, and operating and maintenance plans for all fish passage facilities required by Part A of this condition, prepared in consultation with state and federal fisheries agencies and the Penobscot Indian Nation. These submittals shall be reviewed by and must receive
approval of state and federal fisheries agencies, FERC and the DEP Bureau of Land Quality Control prior to facilities construction.

5. FISH PASSAGE STUDIES

A. The applicant shall, in consultation with state and federal fisheries agencies and the Penobscot Indian Nation, conduct a study to monitor and evaluate the effectiveness of all fish passage facilities constructed pursuant to Condition 4 of this certification.

B. The applicant shall, within 1 year following the issuance of a new FERC license for the project, submit a fish passage study plan and schedule, prepared in consultation with state and federal fisheries agencies and the Penobscot Indian Nation. This plan and schedule shall be reviewed by and must receive approval of state and federal fisheries agencies, FERC, and the DEP Bureau of Land Quality Control.

C. The applicant shall, in accordance with the schedule established in a new FERC license for the project, submit the results of the fish passage study, along with any recommendations for structural, operational changes, or additional fishways, based on the results of the study, to the DEP Bureau of Land Quality Control and to all consulting agencies. The Department reserves the right, after opportunity for hearing, and after reviewing the comments and recommendations for the consulting fishery agencies and the Penobscot Indian Nation, to require reasonable structural and/or operational changes to the existing fish passage facilities, or require additional fishways, as may be necessary to effectively pass anadromous fish through the project area. Any such changes or new fishways must also be approved by FERC.

6. RECREATIONAL FACILITIES AND ACCESS

A. The applicant shall: provide fencing around the parking area on the east bank of the Stillwater Dam and provide warning signs; provide gravel fill and surfacing materials as agreed to in the Memorandum of Understanding between the applicant and the University of Maine; designate a visitor’s parking area at the Stillwater powerhouse; continue to maintain the portage trail around the Stillwater Dam; continue to provide safety booms and hazard warning signs in the vicinity of the Stillwater Dam; and continue to assess the demand for additional recreational opportunities.

B. The applicant shall, in accordance with the schedule established in a new FERC license for the project, submit a schedule for implementing Part A
of this condition. This schedule shall be reviewed by the Department of Conservation and must receive approval of the DEP Bureau of Land Quality Control.

7. LIMITS OF APPROVAL

This approval is limited to and includes the proposals and plans contained in the application and supporting documents submitted and affirmed to by the applicant. All variances from the plans and proposals contained in said documents are subject to the review and approval of the Board or Department prior to implementation.

8. COMPLIANCE WITH ALL APPLICABLE LAWS

The applicant shall secure and appropriately comply with all applicable federal, state and local licenses, permits, authorizations, conditions, agreements and orders required for the operation of the project.

9. EFFECTIVE DATE

This water quality certification shall be effective on the date of issuance of a new hydropower project license by the Federal Energy Regulatory Commission (FERC) and shall expire with the expiration of this FERC license.
