REVIEW OF APPLICATION FOR CERTIFICATION BY THE LOW IMPACT HYDROPOWER INSTITUTE (LIHI) OF THE UPPER OSWEGO RIVER PROJECT

Prepared by:
Gary M. Franc
September 15, 2014

1. INTRODUCTION

The newly defined Upper Oswego River Project (UORP or Project) is comprised of the Federal Energy Regulatory Commission's (FERC) license 5984 for Erie Boulevard Hydropower's (EBH) Oswego Falls East & West hydro developments. EBH is a wholly owned subsidiary of Brookfield Renewable Energy Group (BREG).

Prior to this review, the Project was certified as part of the larger Oswego River Project (ORP or LIHI 35), which was comprised of hydro developments in FERC licenses 5984 and 2474 (Oswego Falls East, Oswego Falls West, Fulton, Minetto and Varick). LIHI's five year certification for the ORP ended on December 7, 2012. Due to the large disparity in the FERC licensing time frames, LIHI has determined that the ORP needs to be separated into two individual LIHI projects. The UORP will now be defined as LIHI Project 35A going forward. The remaining part of the ORP, for developments in FERC license 2474, will now be defined as the Lower Oswego River Project (LORP or LIHI 35B).¹

This report reviews the applicable portions of the application received by LIHI for recertification of the ORP by EBH on October 12, 2012² for certification of the UORP.

2. PROJECT LOCATION

The Project consists of two hydro developments, Oswego Falls East (OFE) and Oswego Falls West (OFW), along the Oswego River in Oswego County, New York. The developments are all located at locks and dams owned by the New York State Canal Corporation (NYSCC), operator of the State Barge Canal System (SBCS).

The Oswego River begins at the confluence of the Seneca and Oneida rivers³ about 23 river miles south of Lake Ontario, and drains approximately 5,100 square miles. The Oswego River flows north through the Lock 1 dam impoundment at the Phoenix Project (FERC No. 4113)⁴. The river then enters the Oswego Falls impoundment formed by the Upper Fulton Dam (Lock 2, River Mile 12.6). The OFE and

¹ FERC granted an amended license to the UORP on October 6, 2009 with a scheduled expiration date of February 29, 2036 - <http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=12167203> . FERC granted an amended license to the LORP on September 7, 2006 with a scheduled expiration date of October 31, 2044 - <http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=11128014> .

² EBH - Steve Murphy, Compliance Specialist - (315.598.6130 - Steven.Murphy@brookfieldrenewable.com).

³ The Seneca River drains the entire Finger Lakes region of Central New York. The Oneida River drains a portion of Oneida Lake. Oneida Lake water can also be passed to the Mohawk River based on decisions of its operators.

⁴ FERC Project 4113 was acquired by Eagle Creek Renewable Energy (ECRE) in 2013.

OFW developments are located immediately below this impoundment.

Once past the UORP, water enters the Fulton-Granby impoundment. The Granby Project (FERC No. 2837) and the Fulton Development of the LORP are located along opposite sides of Lower Fulton Dam (Lock 3), approximately one mile below Upper Fulton Dam. The Oswego River next enters the Minetto Development impoundment of the LORP. The Minetto Development is located near Lock 5, approximately 6.4 miles downstream of Fulton and Granby. Below Minetto, water enters the impoundment at Lock 6 and the High Dam Project (FERC No. 10551), which is owned by the city of Oswego, with EBH providing operation and maintenance support for the plant. Below High Dam, water enters the Varick Development of the LORP. The Varick Development is located near Lock 7, 1.4 miles above the mouth of Lake Ontario.

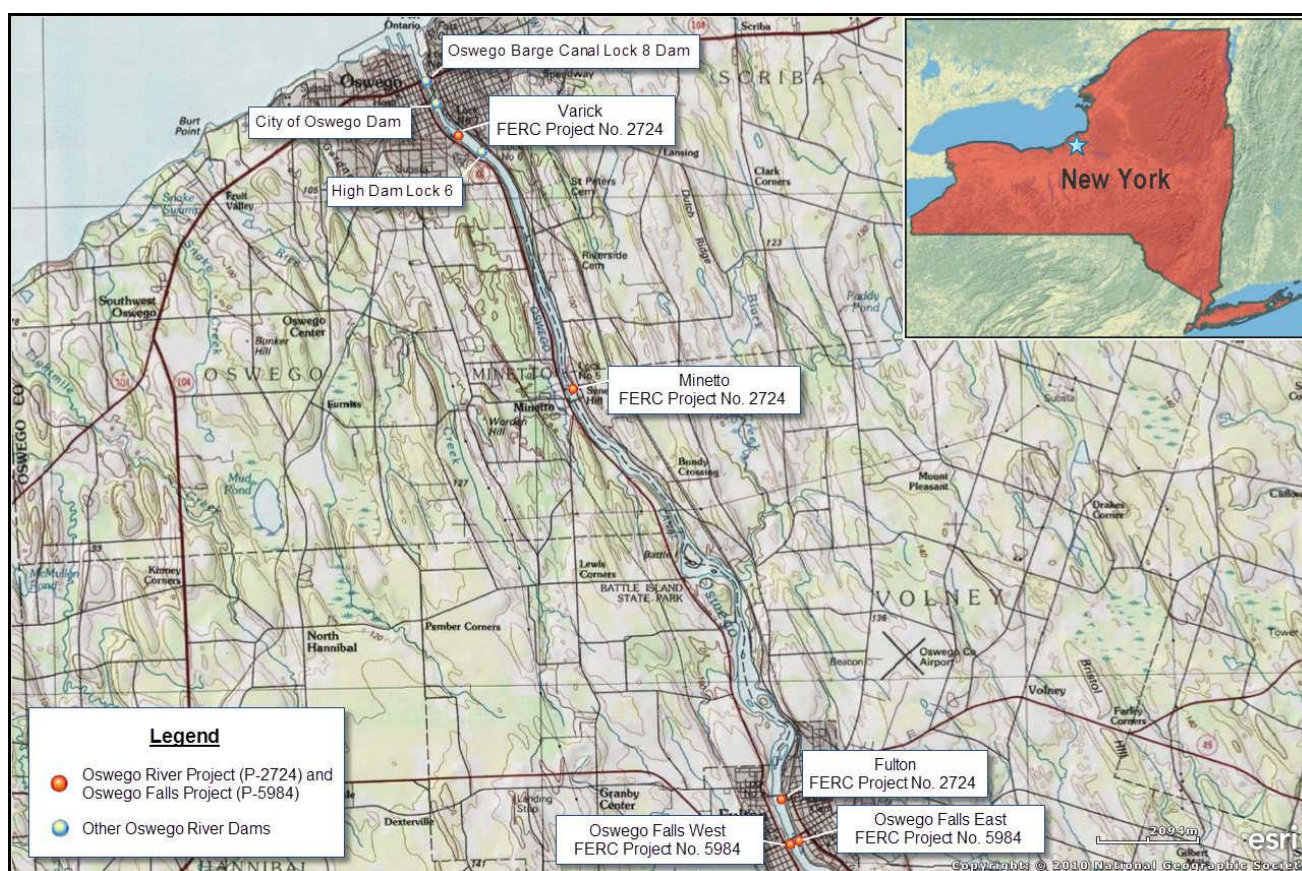

Figure 1 - Location Map

3. PROJECT DESCRIPTION

The Project is located on the Oswego River in the city of Fulton, Oswego County, NY and consists of two powerhouses (OFE and OFW developments) that share a single dam, spillway, and impoundment. The dam, which was constructed in 1927, and forebay gate structures at the Upper Fulton Dam are owned by NYSCC.

The dam has a weir section (top elevation of 354.0 feet) and a spillway section for overflow, equipped with a 1.5-foot high pneumatic flashboard system installed and maintained by EBH. The spillway's crest elevation is 351.8 feet. The top of the pneumatic system is at elevation 353.3 feet. To the west of the weir section, there are six Taintor gates which allow lowering the impoundment to elevation 343.8 feet.

This dam creates a head pond extending 9.4 miles upstream with a gross volume of 3,540 acre-feet and a surface face area of 580 acres at elevation 353.3 feet. The usable storage at 0.5 of drawdown is about 300 acre-feet.

3.1 Major Project Works - Oswego Falls East Development

Licensed project works at the OFE Development (Latitude - 43.3147 N, Longitude: -76.4158 W) include:

- A forebay, located near Lock 2, which is equipped with a trash sluice and electric-operated gate;
- Intake structure with 1-inch trashracks;
- A concrete and brick powerhouse;
- Three vertical Francis-type turbine-generator units. Each unit has an installed capacity of 1.5 MW and a hydraulic capacity of 1,410-cfs at a rated head of 17 feet. The combined hydraulic capacity of the turbines is 4,230-cfs. Minimum flows at the Oswego Falls East Development are provided through the existing trash sluice gate;

Figure 2 – View Looking downstream at the Oswego Falls East (right) and Oswego Falls West (left) Developments at Upper Fulton Dam/Lock 2.

- A tailrace channel separated from the river by a concrete gravity section and earth embankment at the lock by a masonry and concrete retaining wall, and ;
- 2.4-kV primary transmission lines and appurtenant facilities and the 2.4-kV station tie to the West Development.

3.2 Major Project Works - Oswego Falls West Development

Licensed project works at the OFW Development (Latitude - 43.3147 N, Longitude: - 76.4158 W) include:

- NYSCC's forebay gate structure between the Taintor gates and western shore of the river that conveys water to the forebay of the powerhouse and currently acts as the 1-inch trashrack structure;
- Intake head gates and ice and trash sluices;
- A concrete and brick powerhouse;
- Four quadruplex-type turbine/generator units (Units 1, 2, 4, and 5) and two vertical propeller turbine units (Units 6 and 7). Units 1 and 2 are inoperable. Both units 4 and 5 have an installed capacity of 0.93 MW and a hydraulic capacity of 560-cfs, at a rated head of 17 feet. Both Units 6 and 7 have an installed capacity of 0.50 MW and a hydraulic capacity of 416 cfs, at a rated head of 16.7 feet. As approved in FERC's 2006 order amending the license, an additional 0.6 MW of installed capacity was achieved through the replacement of the existing Unit 3 with two vertical propeller units and replacement of the Unit 3 horizontal generator with two new vertically-oriented generators. This increased installed capacity did not require any new dam or other diversion structure. The increased capacity increases the overall discharge of the Project by 432-cfs or 6.6% without affecting conditions for fish, wildlife, and water quality.
- A tailrace channel separated from the river by a concrete gravity section and from the river bank by a concrete retaining wall, and;
- 2.4-kV primary transmission lines and appurtenant facilities.

3.3 Mode of Operation for Power

The Project operation is coordinated with the other Oswego River hydro developments on the Oswego River. Each project uses its storage capabilities to generate power using a modified run-of-river (MROR) operation. At the Project, the MROR operation allows for a 0.5-foot impoundment fluctuation.

The licensed bypass flow for the Project is the lesser of 236-cfs or inflow. The initial 70-cfs of bypass flow is released at the OFE development with the remainder released through Taintor gate 1, which is adjacent to the pneumatic flashboard section of the dam.

The Project generates when total inflow exceeds 652-cfs; enough water to pass the bypass flow plus running one turbine at its minimum turbine limit. Once total inflow exceeds 7,158-cfs, the total hydraulic capacity of the Project, all excess water is spilled at the dam.

The UORP has an overall installed capacity of 7.360 MW and produces an average annual energy (AAE) of 32.256 GWh (Plant factor of 50.2%)

3.4 Mode of Operation for Upstream Fish Passage

EBH installed upstream eel passage facilities at the west end of the spillway to satisfy Article 405 of the FERC license. The upstream eel conveyance system operates seasonally from June 15 to September 15 of each year

FERC license Article 406 includes provisions for a plan for a selective upstream fish passage structure

for Atlantic salmon or other species, as required by the resource agencies. The licensee submitted a plan for the requirements of Articles 406 to FERC on August 13, 2003, which was approved by FERC on October 16, 2003. The plan facilitates the installation of a structure at a later date once substantive fish passage through the downstream locks is effective or if active upstream passage on the Oswego River is adopted as part of New York's Statewide Atlantic Salmon Plan.

Agency fish passage prescriptions for upstream passage of catadromous fish are also described in Section 3.5 of the Oswego River Project Offer of Settlement (ORPSO), submitted to FERC on February 18, 2004⁵.

3.5 Mode of Operation for Downstream Fish Passage

EBH is required to provide minimum bypass flows to benefit resident and migratory fish of 70 cfs at the OFE Development through the existing sluice gate, and 166 cfs at the West Development through the taintor gate adjacent to the pneumatic flashboard section of the dam for fish passage.

With respect to fish impingement, downstream fish protection measures consisting of 1-inch clear spacing trashracks at each development. The OFE rack is also angled to provide more trashrack length while ensure that the approach velocity is below the 2 foot-per-second (fps) threshold.

The increased hydraulic capacity at OFW only slightly increases the approach velocity (as measured 1 foot in front of the trashracks in accordance with US Fish and Wildlife Service (USFWS) guidelines), and the velocity is still 0.52-feet below the recommended maximum 2-fps. As for fish entrainment, during consultation associated with preparation of the amendment application, the USFWS did not oppose the upgrade but did express concern that the diversion of more water through the turbines at the OFW Development could potentially increase entrainment. EBH and USFWS agreed that acceptable mitigation for this potential effect would be to accelerate the schedule for upstream eel passage proposed in the ORPSO.

3.6 Mode of Operation for Minimum Flow Releases

In addition to enhancement for fishery resources, the FERC license, the ORPSO, and Section 401 Water Quality Certificate (WQC)⁶ include the requirements for flow releases and water level control recommended by the New York State Department of Environmental Conservation (NYSDEC) and USFWS.

Each year EBH files documentation with FERC confirming compliance with flow and impoundment level conditions⁷. For construction and maintenance activities that require lowering the level of an impoundment below the normal operating limits, EBH's operating procedure (HOP 202) requires notification of NYSDEC and compliance with drawdown rates specified in the WQC.

Articles 403 and 404 of the FERC license as amended by Sections 3.3 and 3.5 of the ORPSO require EBH to implement a downstream fish passage plan as follows:

- Installed a pneumatic flashboard system at the Oswego Falls Dam to reduce seasonal water level

⁵ A copy of the ORPSO can be found here - <http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=10073003>

⁶ A copy of the WQC can be found here - <http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=11119481>

⁷ A copy of the latest annual minimum flow compliance report for 2013 can be found here:
<http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=13493651>

fluctuation. Limit the impoundment fluctuation of the Oswego Falls head pond to 0.5 feet from permanent crest of dam or top of pneumatic flashboard system year-round.

- Provide a year-round bypass flow of the lesser of 236-cfs or inflow. The initial 70-cfs is released from the OFE Development and the remainder is released from the No. 1 Taintor gate.

4. REGULATORY STATUS

4.1 Summary of Project Redevelopment and Agency Consultation Process

In 1982, the Niagara Mohawk Power Company (NMPC), the predecessor of EBH⁸, filed an application under Part I of the Federal Power Act (FPA) for an original license to upgrade, operate, and maintain the then existing 6.36 MW Oswego Falls Hydroelectric Project (5984) along with other developments on the river. The application planned on continuing to use the New York State Thruway Authority's (NYSTA) Canal Corporation (NYSCC) Lock and Dam No. 2. NMPC proposed to alter operation of the project to run-of-river mode from peaking operations and increase the project's capacity to 8,900 kW.

Concurrently, NMPC requested a water quality certificate (WQC) from the NYSDEC on February 16, 1982. Due to concerns about the license, the NYSDEC held the application in abeyance without prejudice. In April 1987, under Order 464, the FERC determined that WQC had been waived since the NYSDEC had not granted or denied EBH's certification request within 1 year after receiving the application.

Based on FERC's directive, NMPC unbundled the 1982 application for the Oswego River Project into three separate applications. EBH then refiled a new license application with FERC on January 28, 1988 for the Oswego Falls Project separately. In response to FERC requests, EBH submitted additional information on March 5, 1990. The city of Oswego, New York, filed a competing application (Project No. 10945) on June 7, 1990, but withdrew it on September 27, 1993.

NMPC amended its application again on August 9, 1993, with a major revision to proposed operations. The application proposed a run-of-river operation and the installation of a 1.5 high pneumatic flashboard system with a 50-cfs bypass flow release and no upstream fish passage.

Three entities filed timely motions to intervene as a party to these proceedings: the City of Oswego, New York (Oswego), the NYSDEC and the U.S. Department of the Interior (DOI). The American Whitewater Affiliation (AWA), American Rivers Inc. (AR), New York Rivers United (NYRU), and Trout Unlimited (TU) filed a successful joint motion for late intervention.

FERC issued a Draft Environmental Assessment (EA) of the proposed project for public comment on September 29, 1994. In response, the FERC received comment letters from the DOI, NMPC, and the NYSDEC. On March 15, 1996 FERC issued a Final EA incorporating intervenor comments and a 40 year license for the Oswego Falls⁹. The FERC license set the minimum bypass flow at the current 236-cfs.

In 1998 and again in 1999 FERC amended the license to account for discrepancies in the rated installed capacity and annual charges for the project.

⁸ In 1999, NMPC sold their entire hydropower portfolio to Orion Power. EBH was created as a subsidiary of the newly formed company dealing with the operation of the hydropower assets. Orion Power was eventually acquired through a secession of sales and purchases by the BREG, current owner of EBH.

⁹ The FERC license issued on March 15, 1996 - <http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=3037987>.

On February 19, 2004, the April 7, 2003 ORPSO was filed by EBH with FERC. The ORPSO called for agreement on a new WQC for the Oswego River from the NYDEC. On August 25, 2006, a new WQC for the Oswego River was issued by the NYSDEC in support of turbine upgrade proposals by EBH at Oswego River developments.

FERC amended the license for the UORP again, on October 6, 2009. This amendment establishes all of the current operational rules on the Project. On December 2, 2011, the FERC license was amended once more to include Lock No. 2 as a necessary project feature included in the project boundary. The current license expires on February 29, 1936.

4.2 License and Compliance Issues

Since the NYSCC owns and operates the Oswego Canal Lock No. 2 Dam and one forebay gate structure, Article 5 of the original license issued in 1996 required NMPC within 5 years to acquire and retain title in fee to, or the right to use in perpetuity, project property sufficient to accomplish all project purposes. Compliance with this article is still outstanding some eighteen years later.

Although the NYSCC¹⁰ did not object to the terms and conditions imposed upon the prior licensee, NMPC, under the FERC license, as described in the ORPSO, they did not sign the ORPSO and stated they will continue to negotiate with NMPC for a hydropower easement.

The NYSCC has attempted to establish a hydropower easement payment to compensate the NYSCC for the headwater benefits its dams provide EBH. Over the years, FERC has accepted numerous time extensions from EBH on this issue. This non-compliance issue resurfaced in a March 3, 2010, FERC letter to EBH resulting in new dialog and discussions between EBH and NYSCC to resolve the issue. On November 29, 2012 FERC issued a letter to EBH acknowledging receipt of a Memorandum of Agreement (MOA) some 97 days late. FERC stated the late filing would be deemed a violation of the FERC license and stated final resolution of Article 5 is December 31, 2012¹¹. For various legal reasons, EBH requested and received time extensions to resolve this issue. Recently, FERC has stated that Article 5 needs to be resolved no later than December 31, 2014.¹²

5. PUBLIC COMMENTS RECEIVED

LIHI notified and requested public comment on EBH's application for LIHI certification on January 18, 2013. LIHI policy is for all comments to be posted to the web site and for EBH to have an opportunity to respond. Any EBH responses are also posted. Public comments needed to be received on or before 5 pm Eastern time on March 18, 2013, to be considered. No public comments were received by LIHI.

The list of resource agency contacts contained within the LIHI certification application that have been acknowledged to be knowledgeable on the operational issues with the Project are:

- Stephen Patch - USFWS, 3817 Luker Road, Cortland, NY 13045 - (607.753.9334 - Stephen_patch@fws.gov),
- Dave Lemon - NYSDEC, 1285 Fisher Avenue, Cortland, NY 13045-1090 - (607.753.3095 x203 -

¹⁰ NYSCC letter dated October 20, 2003 <http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=9993930>.

¹¹ <http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=13119706>

¹² Article 5 discussion - <http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=13542737>.

- dklemon@gw.dec.state.ny.us), and
- Howard Goebel - NYSCC, 200 Southern Blvd., PO Box 189, Albany, NY 12201-0189 - (518.471.5888 - Howard_goebel@canals.state.ny.us)

On March 24, 2014, this reviewer emailed the USFWS, NYSDEC and the NYSCC. In my email I stated, *"I am the LIHI reviewer tasked with determining whether Brookfield Renewable Energy Group (BREG)'s Oswego River Hydroelectric Project should be LIHI recertified. I am emailing you today because you have been identified in the application by the owner as resource agency and non-governmental organization contacts familiar with the project. I would appreciate your perspective regarding the project's proposed operation with regard to satisfying its licensed environmental obligations (FERC articles). Without your input my review can only be based on the documents found in the FERC docket. Thank you for your time in this matter."*

On April 7, 2014 I received a letter from the USFWS stating, *"The U.S. Fish and Wildlife Service (Service) has received your email of March 24, 2014, requesting input on the application by Brookfield Renewable Energy Group (BREG) for recertification of the Oswego River Hydroelectric Project as low impact. The Service was a party to a settlement with BREG's predecessors in 2003. To the best of our knowledge BREG is in full compliance with all settlement and license conditions. Therefore, we have no objections to recertification of this project as low impact."*

On September 8, 2014, I called Mr. Howard Goebel, Chief Engineer at NYSCC, to discuss any concerns the NYSCC might have regarding LIHI certification of the UORP. He stated, *"The NYSCC is currently in a long drawn out negotiation with BREG pertaining to the establishment of a hydropower easement for EBH's use of the NYSCC's lock dams on the Oswego River. Until the negotiations are finalized, I preferred not to comment."*

6. CONSISTENCY WITH LIHI CRITERIA AND ISSUES IDENTIFIED

The application for LIHI certification and the agency communications are relatively well developed. This section summarizes the record for LIHI certification.

6.1 Summary of the Reviewer's Findings

Criterion A – Flows

Agency recommendations for environmental flow requirements and agreements and coordination with other projects on the Oswego River have been well established in the FERC proceedings for this project.

In summary, EBH provides a year-round bypass flow of the lesser of 236-cfs or inflow. The initial 70-cfs is released from the OFE Development and the remainder is released from the No. 1 Taintor gate. A pneumatic flashboard system has been installed on the overflow spillway section of the Oswego Falls Dam to reduce seasonal water level fluctuation. Impoundment fluctuation of the Oswego Falls head pond is limited to 0.5 feet from permanent crest of dam or top of pneumatic flashboard system year-round.

On July 7, 2009¹³, EBH informed the FERC of an incident that occurred June 2, 2009 whereby the impoundment fluctuation limit at the Oswego Falls Project impoundment was exceeded due to a

¹³ <http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=12080687>

transmission line trip causing OFE units 1 and 3, OFW unit 6 and the upstream hydro plant in Phoenix, NY (Phoenix Hydro - FERC 4113) to trip off-line due to under voltage. Since Phoenix Hydro did not communicate their loss of station flow to EBH's Hydro Control Center, the drastic reduction in inflow to the Oswego Falls Project caused the Oswego Falls pond to drop below its allowable limit for about 30 minutes. Discussions with Phoenix Hydro on the need to communicate emergency conditions promptly to EBH's Hydro Control Center were undertaken to prevent similar occurrences in the future. On September 14, 2009¹⁴, FERC informed EBH its July 9, 2009 letter reporting the June 2, 2009 incident will not be considered a violation of its license.

Similar violations of the Project's lower pond limit occurred of May 5, 2006 and October 21, 2005, this time due to an error in reporting the proper outflow from the Phoenix Hydro¹⁵ and the other due to the Phoenix Hydro plant tripping off line¹⁶. All violations were dismissed or otherwise dealt with by FERC. No additional violations have occurred in the last five years.

In all these instances, the common denominator has been the delay in communication of the drastic change in outflow from the Phoenix Hydro plant. Since the Phoenix plant is located upstream of all the remaining developments on the Oswego River, problems in its operation have major implications downstream. A review of the FERC docket indicates that the Phoenix Hydro development was recently acquired in 2013 by a new owner, ECRE. LIHI needs assurance that ECRE and EBH have established a proper communication protocol to follow in any future emergency situation.

If no procedure currently exists, EBH needs to meet with ECRE to establish a plan of action. A letter documenting and describing this procedure needs to be submitted to LIHI no later than the 90 days after LIHI certification of the Project. In the event that the protocol changes in the future, revised documentation needs to be submitted to LIHI no later than at the time of its next annual compliance statement to LIHI.

Based on adherence to this conditional requirement, it is my view that this LIHI criterion is satisfied.

Criterion B – Water Quality

A WQC was not issued for the UORP with the 1996 FERC license, as FERC determined that a WQC for the Project had been waived. EBH did, however, apply for and obtain a WQC from NYSDEC for the UORP as part of the 2006 license amendment process. The WQC conditions are now part of the Oswego Falls Project License. The UORP is in compliance with all conditions of the WQC issued to the Project after December 31, 1986.

According to the Draft 2012 Section 303(d) List and the Final 2010 Section 3030(d) List, the Oswego River from the dam at Lock 6 to the Upper Fulton Dam is listed as impaired by fish consumption advisories due to polychlorinated biphenol (PCB) contaminated sediments. Also, the New York State Waterbody Inventory/Priority Waterbodies List, which characterizes water quality and the degree to which water uses are supported was updated in February 2008 and lists the Oswego River from the City of Oswego to Fulton as being an impaired segment to fish consumption due primarily from contaminated sediments. The cause of this PCB contamination is not related to the UORP.

The Oswego River in the Project area is classified by NYSDEC as non-trout Class B, from the Village of

¹⁴ <http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=12150030>

¹⁵ <http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=11024502>

¹⁶ <http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=10875271>

Phoenix to Lock 6. For Class B waters, designated best usages are primary and secondary contact recreation and fishing. They are also suitable for fish propagation and survival.

Since EBH is in compliance with water quality aspects of the WQC and the FERC license, this LIHI criterion is satisfied.

Criterion C – Fish Passage and Protection

EBH submitted a plan for the requirements of Articles 404 and 406 to FERC on August 13, 2003, which was approved by FERC on October 16, 2003¹⁷. Agency fish passage prescriptions for upstream and downstream passage of catadromous fish are also described in Section 3.5 of the ORPSO. EBH has installed upstream eel passage facilities at the west end of the spillway, which are currently being operated and maintained in compliance with the license requirements.

Agency recommendations for fish entrainment protection at the Project, also described in Section 3.5 of the ORPSO, include the provision of 1-inch bar spacing trashracks at the UORP. In 2004, the fish protection measures were installed consisting of 1-inch clear spacing trashracks at each development. The OFE rack is also angled to provide more trashrack length while ensure that the approach velocity is below the 2-fps threshold. On January 13, 2005¹⁸, EBH submitted to FERC the as-built Exhibit F drawings pertaining to the one-inch spacing trashracks, which were approved by FERC order issued on September 8, 2005¹⁹.

Article 406 of the FERC license includes provisions for a plan for a selective upstream fish passage structure for Atlantic salmon or other species as required by the resource agencies. The approved plan facilitates the installation of a structure at a later date once substantive fish passage through the downstream locks is effective or if active upstream passage on the Oswego River is adopted as part of New York's Statewide Atlantic Salmon Plan.

A review of the FERC docket indicates that EBH is in compliance with all fish passage and protection aspects of its license, this LIHI criterion is satisfied.

Criterion D – Watershed Protection

No licensee article designates a formal buffer zone around the project impoundments. The Oswego River corridor is relatively heavily developed compared to the rest of Oswego County, with industrial, as well as significant areas of compact, high-density residential land use along both banks of the river. Land use in the area largely reflects the region's industrial history, as the Oswego River and the NYS Barge Canal system was originally used for commercial navigation. NYSCC currently operates the locks and dams to control summer lake levels for boating. The Project is located at an existing NYSCC dam and occupies limited areas and civil works.

The Oswego Falls Project is located in the city of Fulton. The area immediately surrounding the Project consists of well-established commercial urban and light industrial development. Upstream of the project, the land becomes progressively more rural, until the village of Phoenix, which lies at the headwaters of the impoundment.

¹⁷ Both the August 13, 2003 submittal and the October 16, 2003 issuance on the FERC docket are privileged (CEII) documents.

¹⁸ <http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=10367864>

¹⁹ <http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=10711991>

EBH has developed and implemented the license and settlement requirements in consultation with the NYSDEC, USFWS, and other stakeholders. These requirements have enhanced shoreline conditions by reducing impoundment fluctuation.

A review of the FERC docket indicates that EBH is in compliance with all watershed protection aspects of its license, this LIHI criterion is satisfied.

Criterion E – Threatened and Endangered Species Protection

As cited in the September 7, 2006 FERC Order Amending the License for the Project²⁰, except for occasional transient individuals, there are no known federally listed or proposed threatened or endangered species within the project area.

In 2012, EBH consulted with NYSDEC's Natural Heritage Program for an updated list of threatened and endangered species. Pursuant to a letter dated April 30, 2012, NYSDEC indicated that the state and federally-listed endangered Indiana bat has been documented within 0.2 miles of the OFE Development and at or in the vicinity of the OFW Development.

A 2012 review of the USFWS website indicates that Bog turtle, Indiana bat, and piping plover are federally listed species in Oswego County.

The designated piping plover critical habitat in Oswego County is located along the Lake Ontario shoreline and only extends 500 meters inland. As this species prefers beach-areas and avoids developed areas, EBH does not believe piping plover are present in the vicinity of the Oswego Falls Project.

There are no specific requirements for endangered species protection in the FERC license, ORPSO, or WQC for the Project. The NYSDEC has not adopted a formal recovery plan for the threatened lake sturgeon. As lake sturgeon have only been known to occur downstream of the Varick Dam, operations of the UORP is not expected to have any effect on this species.

The USFWS has adopted the following recovery plans for listed species that may be present in the vicinity of the UORP:

- 2001 Bog Turtle (*Clemmys muhlenbergii*), Northern Population Recovery Plan - Hadley, Massachusetts. 103 pp.
- 2003 Recovery Plan for the Great Lakes Piping Plover (*Charadrius melodus*) - Fort Snelling, MN. viii + 141 pp.
- 2007 Indiana Bat (*Myotis sodalis*) Draft Recovery Plan - First Revision -Fort Snelling, MN. 258 pp.

As explained above, piping plover is not likely present in the vicinity of the Project and the associated recovery plan is not applicable to project operations.

Recovery actions identified in USFWS's Indiana Bat Draft Recovery Plan include hibernacula-related recovery actions and summer habitat management. No Indiana bat hibernacula, which typically include caves and mines, are known to exist in the immediate vicinity of the Project. Transient individuals may, however, be present, presumably in association with summer habitat. Indiana bats have been

²⁰ <http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=11128014>

documented within 0.2 miles of the Project. Habitat guidance has not yet been drafted for the Northeast Recovery Unit identified in the draft Recovery Plan but will most likely involve protection of habitat areas, comprised of mature or dead trees, and limiting tree-clearing during the summer months. Operations of the Project at NYSCC's dam are consistent with this draft recovery plan, as minimal vegetation removal and land management is associated with this project.

According to the 2001 bog turtle recovery plan, the extant population in Oswego County represents the northern range of this species. Bog turtles inhabit a variety of wetland types but generally prefer small, open-canopy, herbaceous sedge meadows and fens bordered by more thickly vegetated and wooded areas, and their primary habitat includes seepage or spring-fed emergent wetlands associated with streams, often at or near the headwaters of streams or small tributaries. Because the Project is located in relatively highly developed, open-river areas, bog turtles are not expected to be found in the immediate vicinity of the project. As described in the recovery plan, conservation efforts focus on habitat protection, especially arresting succession of open wetlands to wooded swamp and control of invasive plants. Operation at the Project is consistent with this recovery plan, as the modified run-of-river operating mode improves habitat including wetland conditions within the Project area.

Since no formal recovery plans have been requested by resource agencies at the Project, the project passes this criterion.

Criterion F – Cultural Resources

There are no license requirements regarding cultural resources protection, mitigation, or enhancement for the Project. As described in the 1996 EA, on April 11, 1991 the New York State Historic Preservation Office (SHPO) issued a determination that continued operation of the Project would have no effect on properties listed in or eligible for the National Register of Historic Places.

Therefore, the Project in compliance with all requirements regarding cultural resource protection, mitigation or enhancement and passes this criterion.

Criterion G – Recreation

The Oswego River canal system receives intensive recreational boating use, and the locks and dams along the river are popular spots for shoreline fishing. NYSCC operates the Oswego River lock system seven days a week from 7 a.m. to 10 p.m. during peak navigation season (late May to early October) and reduced hours during the remainder of the season, and the locks provide boating access around the dams.

The primary recreational activity within the Projects' boundaries is fishing at EBH facilities or the day-use-oriented recreational facilities managed by the state or local municipalities that are found along the stretch of the Oswego River spanned by the Project.

Articles 408 and 409 of the FERC license required construction and operation of a tailwater fishing access at the lower Lock 2 Island below the Upper Fulton Dam and funding to the Village of Phoenix for a boat launch facility, respectively.

By order dated April 2, 2002²¹, FERC deleted Article 408 and determined that the requirements of Article 408 had been met through informal facilities improved and maintained by NYSCC as part of its

²¹ <http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=9057772:1>

Lock 2 facilities. FERC confirmed by letter dated May 17, 2004²² that the requirements of Article 409 had been met through Niagara Mohawk's donation of \$7,500 and 2.3 acres of Lock Island prior to license issuance. The Village of Phoenix boat launch facility is completed and operational.

Public fishing and river viewing areas are also maintained at the Project as required by License Article 410. In 2002²³, FERC approved this plan, which describes the public access areas at the OFE and OFW developments. These areas include the handicapped-accessible upstream sides of the island on which the OFE Development powerhouse is located as well as the shoreline upstream of the forebay at the OFW Development.

EBH permits free public access to the shorelines of the Project across EBH's lands where project facilities, hazardous areas and existing leases, easements, and private ownership do not preclude access.

The UORP is in compliance with recreational access, accommodation, and facilities conditions in the FERC license and passes this criterion.

Criterion H – Dam Removal

No state or federal agencies have recommended that dam to be removed. Therefore, the project passes this criterion.

6.2 Recommendations of the Reviewer

Based on my review of information submitted by the applicant, the additional documentation noted herein, public comments submitted in writing or other communications with resource agencies and other entities, I find that the project conforms to current LIHI criteria. I recommend that the Upper Oswego Falls Project be conditionally certified, with a certification term of five years.

Some violations of the lower head pond limit have occurred in the last 7 years with no violations occurring in the last 5 years. In all these instances, the common denominator has been the delay in communication of the drastic change in outflow from the Phoenix Hydro plant. The Phoenix Hydro development was recently acquired in 2013 by a new owner, ECRE. LIHI needs assurance that ECRE and EBH have established a proper communication protocol to follow in any future emergency situation.

Therefore, a condition is recommended for inclusion in the certification, as follows:

1. A letter documenting and describing a communication protocol between EBH and ECRE to following during future emergency situations needs to be submitted to LIHI no later than the 90 days after LIHI certification of the Project. If no communication protocol currently exists, EBH needs to meet with ECRE to establish this procedure. In the event that the protocol changes in the future, revised documentation needs to be submitted to LIHI no later than at the time of its next annual compliance statement to LIHI. LIHI certification may either be suspended or terminated, if this condition is not followed. This decision would be at the sole discretion of LIHI.

²² <http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=10151966>

²³ <http://elibrary.ferc.gov/idmws/common/OpenNat.asp?fileID=9524861>

7. DETAILED CRITERIA EVALUATION

7.1 Flows

LIHI Goal: The Flows Criterion ensures that healthy flows for fish, wildlife and water quality are provided downstream of the project and in all bypassed reaches, including, where appropriate, seasonal flow fluctuations characteristic of a natural system.	
A.1	<p><i>Is the Facility in Compliance with Resource Agency Recommendations issued after December 31, 1986 regarding flow conditions for fish and wildlife protection, mitigation and enhancement (including in-stream flows, ramping and peaking rate conditions, and seasonal and episodic instream flow variations)</i></p> <p>Reviewer Analysis: EBH is in compliance with flow conditions at the Project as defined in the FERC license. Each year EBH files documentation with FERC confirming compliance with flow and impoundment level conditions.</p> <p>Conclusion: Pass A.1; go to the Water Quality Criterion.</p>
A.2	<p><i>If there is no flow condition recommended by any Resource Agency for the Facility, or if the recommendation was issued prior to January 1, 1987, is the Facility in Compliance with a flow release schedule, both below the tailrace and in all bypassed reaches, that at a minimum meets Aquatic Base Flow standards or "good" habitat flow standards calculated using the Montana-Tennant method?</i></p> <p>Reviewer Analysis and Conclusion: N/A.</p>
A.3	<p><i>If the Facility is unable to meet the flow standards in A.2., has the Applicant demonstrated, and obtained a letter from the relevant Resource Agency confirming that demonstration, that the flow conditions at the Facility are appropriately protective of fish, wildlife, and water quality?</i></p> <p>Reviewer Analysis and Conclusion: N/A.</p>

7.2 Water Quality

LIHI Goal: The Water Quality Criterion ensures that water quality in the river is protected.	
B.1	<p><i>Is the Facility either:</i></p> <p><i>a) In Compliance with all conditions issued pursuant to a Clean Water Act Section 401 water quality certification issued for the Facility after December 31, 1986? Or</i></p> <p><i>b) In Compliance with the quantitative water quality standards established by the state that support designated uses pursuant to the federal Clean Water Act in the Facility area and in the downstream reach?</i></p> <p>Reviewer Analysis: A 401 Water Quality Certificate was issued to the project on August 23, 2006 and was integrated into the current FERC license.</p> <p>Conclusion: YES, Pass B.1(a); Go to B.2</p>
B.2	<p><i>Is the Facility area or the downstream reach currently identified by the state as not meeting water quality standards (including narrative and numeric criteria and designated uses) pursuant to Section 303(d) of the Clean Water Act?</i></p>

	<p>Reviewer Analysis: According to the 2012 Section 303(d) List and the Final 2010 Section 3030(d) List, the Oswego River from the dam at Lock 6 to the Upper Fulton Dam is listed as impaired by fish consumption advisories due to polychlorinated byphenol (PCB) contaminated sediments. Also, the New York State Waterbody Inventory/Priority Waterbodies List, which characterizes water quality and the degree to which water uses are supported was updated in February 2008 and lists the Oswego River from the City of Oswego to Fulton as being an impaired segment to fish consumption due primarily from contaminated sediments. The cause of this PCB contamination is not related to the UORP. This LIHI criterion is satisfied.</p> <p>Conclusion: YES; Go to B.3</p>
B.3	<p><i>If the answer to question B.2 is yes, has there been a determination that the Facility does not cause, or contribute to, the violation?</i></p> <p>Reviewer Analysis: With respect to the segment of the Oswego River that is listed on the 2010/2012 Section 303(d) List, the cause of this impairment is PCB contamination and is not related to the Oswego Falls Project.</p> <p>Conclusion: YES; Pass on B.3; Go to Fish Passage Criterion.</p>

7.3 Fish Passage and Protection

LIHI Goal: The Fish Passage and Protection Criterion ensure that, where necessary, the Facility provides effective fish passage for Riverine, anadromous and catadromous fish, and protects fish from entrainment.	
C.1	<p><i>Is the Facility in Compliance with Mandatory Fish Passage Prescriptions for upstream and downstream passage of anadromous and catadromous fish issued by Resource Agencies after December 31, 1986?</i></p> <p>Reviewer Analysis: EBH submitted a plan for the requirements of Articles 404 and 406 to FERC on August 13, 2003, which was approved by FERC on October 16, 2003. Agency fish passage prescriptions for upstream and downstream passage of catadromous fish are also described in Section 3.5 of the ORPSO. EBH has installed upstream eel passage facilities at the west end of the spillway, which are currently being operated and maintained in compliance with the license requirements. Agency recommendations for fish entrainment protection at the Project, also described in Section 3.5 of the ORPSO, include the provision of 1-inch bar spacing trashracks at the UORP. In 2004, the fish protection measures were installed consisting of 1-inch clear spacing trashracks at each development. The OFE rack is also angled to provide more trashrack length while ensure that the approach velocity is below the 2-fps threshold. On January 13, 2005, EBH submitted to FERC the as-built Exhibit F drawings pertaining to the one-inch spacing trashracks, which were approved by FERC order issued on September 8, 2005.</p> <p>Article 406 of the FERC license includes provisions for a plan for a selective upstream fish passage structure for Atlantic salmon or other species as required by the resource agencies. The approved plan facilitates the installation of a structure at a later date once substantive fish passage through the downstream locks is effective or if active upstream passage on the Oswego River is adopted as part of New York's Statewide Atlantic Salmon Plan.</p> <p>A review of the FERC docket indicates that EBH is in compliance with all fish passage and protection aspects of its license, this LIHI criterion is satisfied.</p> <p>Conclusion: Yes; go to C.2</p>
C.2	<p><i>Are there historic records of anadromous and/or catadromous fish movement through the Facility area, but anadromous and/or catadromous fish do not presently move through the Facility area (e.g., because passage is blocked at a downstream dam or the fish run is extinct)?</i></p> <p>Reviewer Analysis: No historical records were found of migratory fish in the project vicinity prevented from passage due to downstream blockage of fish extinction.</p> <p>Finding: NO; Go to C.3</p>
C.3	<p><i>If, since December 31, 1986:</i></p> <p>a) Resource Agencies have had the opportunity to issue, and considered issuing, a Mandatory</p>

	<p>Passage Prescription for upstream and/or downstream passage of anadromous or catadromous fish (including delayed installation as described in C2a above), and</p> <p>b) The Resource Agencies declined to issue a Mandatory Fish Passage Prescription,</p> <p>c) Was a reason for the Resource Agencies' declining to issue a Mandatory Fish Passage Prescription one of the following: (1) the technological infeasibility of passage, (2) the absence of habitat upstream of the Facility due at least in part to inundation by the Facility impoundment, or (3) the anadromous or catadromous fish are no longer present in the Facility area and/or downstream reach due in whole or part to the presence of the Facility?</p>
	<p>Reviewer Analysis: The agencies have issued a prescribe fish passage as discussed in C.1. None of the C.3.b or C.3.c factors apply to this Facility.</p> <p>Conclusion: N/A; Go to C.4</p>
C.4	<p>If C3 was not applicable:</p> <p>a) are upstream and downstream fish passage survival rates for anadromous and catadromous fish at the dam each documented at greater than 95% over 80% of the run using a generally accepted monitoring methodology? OR</p> <p>b) If the Facility is unable to meet the fish passage standards in 4.a, has the Applicant either i) demonstrated, and obtained a letter from the U.S. Fish and Wildlife Service or National Marine Fisheries Service confirming that demonstration, that the upstream and downstream fish passage measures (if any) at the Facility are appropriately protective of the fishery resource, or ii) committed to the provision of fish passage measures in the future and obtained a letter from the U.S. Fish and Wildlife Service or the National Marine Fisheries Service indicating that passage measures are not currently warranted?</p>
	<p>Reviewer Analysis: The FOP is designed to take affect once construction is completed. It contains procedures to follow if upstream and downstream fish passage survival rates for anadromous and catadromous fish at the dam are documented as not meeting the standards in C.4.a.</p> <p>Finding: N/A; Go to C.5</p>
C.5	<p>Is the Facility in Compliance with Mandatory Fish Passage Prescriptions for upstream and/or downstream passage of Riverine fish?</p>
	<p>Reviewer Analysis: Covered in response to C.1. No compliance issues are documented.</p> <p>Finding: N/A; Go to C.6</p>
C.6	<p>Is the Facility in Compliance with Resource Agency Recommendations for Riverine, anadromous and catadromous fish entrainment protection, such as tailrace barriers?</p>
	<p>Reviewer Analysis: The USFWS has reserved their authority to set mandatory conditions for migratory fish entrainment protection measures under the license and WQC.</p> <p>Finding: N/A; PASS and go to the Watershed Protection Criterion.</p>

7.4 Watershed Protection

LIHI Goal: The Watershed Protection criterion is designed to ensure that land resources are being protected within and around the facility boundary. The term of certification is extended from five to eight years for projects that have either a shoreline buffer zone or a watershed enhancement fund.	
D.1	<i>Is there a buffer zone dedicated for conservation purposes (to protect fish and wildlife habitat, water quality, aesthetics and/or low-impact recreation) extending 200 feet from the high water mark in an average water year around 50 - 100% of the impoundment, and for all of the undeveloped shoreline?</i>
	Reviewer Analysis: No licensee article designates a formal buffer zone around the project impoundments. Conclusion: No, Go to D.2
D.2	<i>Has the facility owner/operator established an approved watershed enhancement fund that:</i> <i>a) could achieve within the project's watershed the ecological and recreational equivalent of land protection in D.1., and</i> <i>b) has the agreement of appropriate stakeholders and state and federal resource agencies?</i>
	Reviewer Analysis/Conclusions: N/A. Conclusion: Go to D.3
D.3	<i>Has the facility owner/operator established through a settlement agreement with appropriate stakeholders and that has state and federal resource agencies agreement an appropriate shoreline buffer or equivalent watershed land protection plan for conservation purposes (to protect fish and wildlife habitat, water quality, aesthetics and/or low impact recreation).</i>
	Reviewer Analysis: Through the 1996 FERC license and associated management plans, as well as the 2004 Offer of Settlement, EBH has effectively implemented land protection measures to protect fish and wildlife habitat, water quality, aesthetics, and low-impact recreation. Conclusion: YES, Go to D.4
D.4	<i>Is the facility in compliance with both state and federal resource agencies recommendations in a license approved shoreline management plan regarding protection, mitigation or enhancement of shoreline surrounding the project?</i>
	Reviewer Analysis: See response to D.3. No agency concerns have surfaced. Conclusion: Yes; pass and Go to Threatened/Endangered Species Criterion.

7.5 Threatened and Endangered Species Protection

LIHI Goal: The Threatened and Endangered Species Protection Criterion is designed to ensure that the Facility does not negatively impact state or federal threatened or endangered species.	
E.1	<p><i>Are threatened or endangered species listed under state or federal Endangered Species Acts present in the Facility area and/or downstream reach?</i></p> <p>Reviewer Analysis: Pursuant to a letter dated April 30, 2012, NYSDEC indicated that the state and federally-listed endangered Indiana bat has been documented within 2.0 miles of the Oswego Falls East Development and at or in the vicinity of the Oswego Falls West Development. A 2012 review of the USFWS website indicates that Bog turtle, Indiana bat, and piping plover are federally listed species in Oswego County.</p> <p>Conclusion: YES; Go to E2.</p>
E.2	<p><i>If a recovery plan has been adopted for the threatened or endangered species pursuant to Section 4(f) of the Endangered Species Act or similar state provision, is the Facility in Compliance with all recommendations in the plan relevant to the Facility?</i></p> <p>Reviewer Analysis: There are no formal recovery plans for the threatened and endangered species at the Project.</p> <p>Conclusion: N/A; Go to E3.</p>
E.3	<p><i>If the Facility has received authorization to incidentally Take a listed species through: (i) Having a relevant agency complete consultation pursuant to ESA Section 7 resulting in a biological opinion, a habitat recovery plan, and/or (if needed) an incidental Take statement; (ii) Obtaining an incidental Take permit pursuant to ESA Section 10; or (iii) For species listed by a state and not by the federal government, obtaining authorization pursuant to similar state procedures; is the Facility in Compliance with conditions pursuant to that authorization?</i></p> <p>Reviewer Analysis: There are no formal incidental take permits for the threatened and endangered species at the Project.</p> <p>Conclusion: N/A; E4 and E5 do not apply. Go to Cultural Resource Protection Criterion.</p>

7.6 Cultural Resources

LIHI Goal: The Cultural Resource Protection Criterion is designed to ensure that the Facility does not inappropriately impact Cultural Resources.	
F.1	<p><i>If FERC-regulated, is the Facility in Compliance with all requirements regarding Cultural Resource protection, mitigation or enhancement included in the FERC license or exemption?</i></p> <p>Reviewer Analysis: There are no license requirements regarding cultural resource protection, mitigation, or enhancement for the Oswego Falls Project. As described in the 1996 EA and license order for the Oswego Falls Project, in 1991 the New York State Historic Preservation Office (SHPO) issued a determination that continued operation of the Oswego Falls Project would have no effect on properties listed in or eligible for the National Register of Historic Places.</p> <p>Finding: N/A; PASS and go to Recreation Criterion.</p>

7.7 Recreation

LIHI Goal: The Recreation Criterion is designed to ensure that the Facility provides access to the waters and accommodates recreational activities.	
G.1	<p><i>If FERC-regulated, is the Facility in Compliance with the recreational access, accommodation (including recreational flow releases) and facilities conditions in its FERC license or exemption?</i></p> <p>Reviewer Analysis: The Oswego Falls Project is in compliance with recreational access, accommodation, and facilities conditions in the FERC license.</p> <p>Finding: YES; Go to G.3</p>
G.3	<p><i>Does the Facility allow access to the reservoir and downstream reaches without fees or charges?</i></p> <p>Reviewer Analysis: Access is provided without charge within the limited Project boundaries.</p> <p>Finding: YES; PASS and go to Dam Removal Criterion.</p>

7.8 Dam Removal

LIHI Goal: The Dam Removal Criterion is designed to ensure that the Facility is not certified if a Resource Agency has recommended that a dam associated with the Facility should be removed.	
H.1	<p><i>Is there a Resource Agency Recommendation for removal of the dam associated with the Facility?</i></p> <p>Reviewer Analysis: There is no evidence that any agencies have requested that the Project dam be removed.</p> <p>Conclusion: NO, pass H.1 and pass on all LIHI criteria.</p>

APPENDIX A

FERC CORRESPONDENCE

FERC documents listed in reverse chronological order. Click on the hyperlink in the table to view the referenced FERC documents in FERC's library. You need to be connected to the web. The initial click will return the file's properties (author, recipient, etc.). Clicking on the [File List] tab will return a document list. Clicking on a document name will open the document for viewing.
